

NF18MESH – USER GUIDE

CloudMesh Gateway

Doc No. UG01040

Important Notice

This device, like any wireless device, operates using radio signals which cannot guarantee the transmission and reception of data in all conditions. While the delay or loss of signal is rare, you should not rely solely on any wireless device for emergency communications or otherwise use the device in situations where the interruption of data connectivity could lead to death, personal injury, property damage, data loss, or other loss. NetComm Wireless accepts no responsibility for any loss or damage resulting from errors or delays in transmission or reception, or the failure of the NetComm NF18MESH to transmit or receive such data.

The information contained herein is proprietary to NetComm Wireless Pty Limited. No part of this document may be translated, transcribed, reproduced, in any form, or by any means without prior written consent of NetComm Wireless Pty Limited.

Trademarks and registered trademarks are the property of NetComm Wireless Pty Limited or their respective owners. Specifications are subject to change without notice. Images shown may vary slightly from the actual product.

Note – This document is subject to change without notice.

Save our environment

When this equipment has reached the end of its useful life, it must be taken to a recycling centre and processed separately from domestic waste.

The cardboard box, the plastic contained in the packaging, and the parts that make up this device can be recycled in accordance with regionally established regulations. Never dispose of this electronic equipment along with domestic waste. You may be subject to penalties or sanctions under the law. Instead, ask for disposal instructions from your municipal government.

Please be responsible and protect our environment.

Document history

This guide covers the following product:

NF18MESH CloudMesh Gateway

VER.	DOCUMENT DESCRIPTION	DATE
v1.0	Initial document release	April 2020
v1.1	Added notes about Block list limitations and SAMBA support	March 2021
v1.2	Updated notes about Parental Control and Content Sharing	January 2022
V1.3	Update branding	2 September 2025
V1.4	Updated the domain name to the correct value	9 March 2026

Overview

Introduction

This manual provides information related to the installation, operation, and use of the NF18MESH.

Target audience

The individual reading this manual is presumed to have a basic understanding of telecommunications terminology and concepts.

Prerequisites

Before continuing with the installation of your NF18MESH, please confirm that you meet the minimum system requirements below.

-  An activated ADSL/VDSL or pre-configured WAN connection.
-  A computer with a working Ethernet adapter or wireless 802.11a/b/g/n/ac capability and the TCP/IP Protocol installed.
-  A current version of a web browser such as Internet Explorer®, Mozilla Firefox® or Google Chrome™.

Notation

The following symbols are used in this manual:

Note – This note contains useful information.

Important – This is important information that may require your attention.

Warning – This is a warning that may require immediate action in order to avoid damage or injury.

Interfaces

The NF18MESH is designed to be placed on a desktop with the front facing outward.

All of the cables exit from the rear for easy organization and the power ON/OFF and WPS buttons on the side.

Front view

The LED display visible on the front of the NF18MESH provides you with information about network activity and the device status.

Figure 1 – NF18MESH LED indicator display

LED indicators

The following table contains an explanation of each of the indicator lights on the front of the NF18MESH.

LABEL	ICON	COLOUR	DEFINITION
POWER		Red	The NF18MESH is powered on and initialising.
		Green	The NF18MESH is powered on and operating normally.
		Off	The power is off.
INTERNET		Green	The NF18MESH is connected to an internet service.
		Green Blinking	Data is being transmitted to or from the internet.
		Off	The NF18MESH is not connected to the internet.

LABEL	ICON	COLOUR	DEFINITION
ETHERNET	1 2 3 4	Green	A device is connected to the Ethernet LAN port.
		Green Blinking	Data is being transmitted to or from the Ethernet LAN port.
		Off	No device is connected to the Ethernet LAN port.
WiFi	2.4	Green	WiFi is enabled.
		Green Blinking	Data is being transmitted to or from the Wireless interface.
		Off	WiFi is disabled.
	5	Green	WiFi is enabled.
		Green Blinking	Data is being transmitted to or from the Wireless interface.
		Off	WiFi is disabled.
WPS		Green	WPS push button connect is triggered.
		Green Blinking	WPS is pairing.
		Off	WPS is disabled.
USB	1 2	Green	A USB device is connected.
		Green Blinking	Data is being transmitted through the USB interface.
		Off	No USB device is connected to the USB interface.
TELEPHONE	1 2	Green	VoIP service is registered.
		Green Blinking	Incoming call or the handset is in use.
		Off	No handset registered

LABEL	ICON	COLOUR	DEFINITION
WAN		Green	A device is connected to the Ethernet WAN port.
		Green Blinking	Data is being transmitted to or from the WAN.
		Off	No device is connected to the Ethernet WAN port.
DSL		Off	No DSL signal detected.
		Green Blinking	Synching
		Green	DSL synchronized.

Rear view

The following interfaces are available on the rear panel of the NF18MESH:

Figure 2 – NF18MESH router rear view

NO.	INTERFACE	DESCRIPTION
1	DSL	Use the provided RJ11 cable to connect the router to the telephone line operating your xDSL service.
2	TELEPHONE 1 and 2	Connect a regular analogue telephone handset here for use with a VoIP service.
3	ETHERNET 1 - 4	Gigabit Ethernet LAN ports. Connect your Ethernet based devices to one of these ports for high-speed internet access.

4	WAN	Gigabit capable WAN port for connection to a WAN network. Connect to your Network Termination Device (NTD) for high-speed internet access.
5	RESET button	Reset unit to Default by holding the Reset button down for 10 seconds when unit is powered on.
6	2.4G WPS and 5G WPS buttons	Press the 2.4G WPS button to activate the WPS PBC pairing function for the 2.4GHz radio. Press the 5G WPS button to activate the WPS PBC pairing function for the 5GHz radio.
7	USB1	Connect an external USB storage device here to use the Network Attached Storage (NAS) feature of the NF18MESH.
8	POWER supply jack	Connection point for the included power adapter. Connect the power supply here.
9	Rear product label	Contains information about this specific NF18 MESH device, including: - Product Model Number - Part Code - MAC ID number - Serial Number - Gateway Login details - WiFi Network Name and password - Power requirements, etc.

Rear interface table

Left side view

Figure 3 – NF18MESH router side view

NO	INTERFACE	DESCRIPTION
1	On/Off button	Toggles the power on and off.
2	USB2	Connect an external USB storage device here to use the Network Attached Storage (NAS) feature of the NF18MESH.

Side interface table

Safety and product care

Your router is an electronic device that sends and receives radio signals. Please take the time to read this list of precautions that should be taken when installing and using the router.

-  Do not disassemble the router. There are no user-serviceable parts.
-  Do not allow the router to come into contact with liquid or moisture at any time. To clean the device, wipe it with a damp cloth.
-  Do not restrict airflow around the device. This can lead to the device overheating.
-  Do not place the device in direct sunlight or in hot areas.

Transport and handling

When transporting the NF18MESH, it is recommended to return the product in the original packaging. This ensures that the product will not be damaged.

Attention — In the event the product needs to be returned, ensure it is securely packaged with appropriate padding to prevent damage during courier transport.

Physical dimensions and weight

The table below lists the physical dimensions and weight of the NF18MESH.

DIMENSIONS	
Width	230 mm
Height	200 mm
Depth	75 mm
Weight	558 grams

Physical dimensions and weigh table

Installation and configuration

Placement of your NF18MESH

The wireless connection between your NF18MESH and your WiFi devices will be strong when they are in close proximity and have direct line of sight. As your client device moves further away from the NF18MESH or solid objects block direct line of sight to the router, your wireless connection and performance may degrade. This may or may not be directly noticeable and can be greatly affected by the individual installation environment.

If you have concerns about your network's performance that might be related to range or obstruction factors, try moving the computer to a position between three to five meters from the NF18MESH in order to see if distance is the problem.

Note – While some of the items listed below can affect network performance, they will not prohibit your wireless network from functioning; if you are concerned that your network is not operating at its maximum effectiveness, this check list may help

If you experience difficulties connecting wirelessly between your WiFi devices and your NF18MESH, please try the following steps:

-  In multi-storey homes, place the NF18MESH on a floor that is as close to the centre of the home as possible. This may mean placing the NF18MESH on an upper floor.
-  Try not to place the NF18MESH near a cordless telephone that operates at the same radio frequency as the NF18MESH (2.4GHz/5GHz).

Avoid obstacles and interference

Avoid placing your NF18MESH near devices that may emit radio “noise,” such as microwave ovens. Dense objects that can inhibit wireless communication include:

-  Refrigerators
-  Washers and/or dryers

-  Metal cabinets
-  Large aquariums
-  Metallic-based, UV-tinted windows
-  If your wireless signal seems weak in some spots, make sure that objects such as those listed above are not blocking the signal's path (between your devices and the NF18MESH).

Cordless phones

If the performance of your wireless network is impaired after considering the above issues, and you have a cordless phone:

-  Try moving cordless phones away from your NF18MESH and your wireless-enabled computers.
-  Unplug and remove the battery from any cordless phone that operates on the 2.4GHz or 5GHz band (check manufacturer's information). If this fixes the problem, your phone may be interfering with the NF18MESH.
-  If your phone supports channel selection, change the channel on the phone to the farthest channel from your wireless network. For example, change the phone to channel 1 and move your NF18MESH to channel 11. See your phone's user manual for detailed instructions.
-  If necessary, consider switching to a 900MHz or 1800MHz cordless phone.

Hardware installation

- 1 Connect the power adapter to the Power socket on the back of the NF18MESH.
- 2 Plug the power adapter into the wall socket and switch on the power.
- 3 Wait approximately 60 seconds for the NF18MESH to power up.

Connect a client via Ethernet cable

- 1 Connect the yellow Ethernet cable provided to one of the yellow ports marked 'Ethernet' at the back of the NF18MESH.
 - 2 Connect the other end of the yellow Ethernet cable to your computer.
 - 3 Wait approximately 30 seconds for the connection to establish.
 - 4 Open a web browser (such as Mozilla Firefox® or Google Chrome™), type <http://cloudmesh.home> into the address bar and press **Enter**.
If you encounter difficulties connecting, type <http://192.168.20.1> and press **Enter**.
 - 5 Follow the steps to set up your NF18MESH.
- See the **Initial NF18MESH configuration** section of this guide on page 14.

Connect a client wirelessly

- 1 Ensure WiFi is enabled on your device (e.g. computer/laptop/smartphone).
- 2 Scan for wireless networks in your area and connect to the network name that matches the **WiFi Network Name** that is printed on label on the back of the NF18MESH.
- 3 When prompted for your wireless security settings, enter the Wireless security key configured on the NF18MESH.
- 4 Wait approximately 30 seconds for the connection to establish.

- 5 Open your Web browser and enter <http://cloudmesh.home> (or <http://192.168.20.1>) into the address bar and press **Enter**.

- 6 Follow the steps to set up your NF18MESH.

See the **Initial NF18MESH configuration** section of this guide on page 14.

Connect a client via WPS

The NF18MESH provides three methods to establish a connection with client devices using the WPS functionality.

Connect a device using the WPS button (default setting)

- 1 Bring a WPS enabled device within WiFi range and press its WPS (it may be physical or virtual, e.g. on its user interface) button.
- 2 Press the WPS button on the back of the NF18MESH. Its WPS icon on the front of the Gateway will blink green for up to two minutes.
- 3 Once the device is connected, the WPS LED will remain illuminated and details of the device will be added to the **Wireless Clients** list.

Connect a device using the NF18MESH's WPS PIN

- 1 In the NF18MESH's web interface open **WIRELESS > More Settings > WPS Setup**:

WPS Setup

WPS Function: ☒ On ☐ Off

WPS Mode: ☒ Router ☐ Device ☐ Push Button

Router PIN:

WPS Connect

- a Select **WPS Mode** ☒ **Router** and click the **Apply** button.
 - b Copy the **Router PIN** number.
- 2 Bring a WPS enabled device within WiFi range and enter the **Router PIN** into its WPS setup interface.
 - 3 Return to **WIRELESS > More Settings > WPS Setup** and click the **WPS Connect** button.
 - 4 The WPS blue icon will blink while the connection is established.
 - 5 Once the device is connected, the WPS LED will remain illuminated and details of the device will be added to the **Wireless Clients** list.

Initial NF18MESH configuration

This section is for users who are connecting the NF18MESH to the internet for the first time after either initial purchase or factory reset of the device.

After establishing a connection between the NF18MESH and your web browser (see previous: **Connect a client via Ethernet cable** or **Connect a client wirelessly**) enter <http://cloudmesh.home> or <http://192.168.20.1> into the address bar and press **Enter**.

Log in

The login screen will appear:

The login screen for NetCommWireless. It has a blue header with the NetCommWireless logo. Below the header, it says "LOGIN TO YOUR DEVICE". There are two input fields: "Username" with the text "admin" and "Password" with masked characters ".....". A "Login >" button is at the bottom right.

Enter the default **Username** “admin” (all letters are lowercase) and the unique **Password** which is printed on the label on the back of the NF18MESH.

It is recommended that after you set up the NF18MESH you choose a more secure username and password. These can be set in: **Main menu >Advanced > Management > Passwords**

Set up options

If you have not yet set up your device the following screen will appear:

The setup screen for NetCommWireless. It has a blue header with the NetCommWireless logo. Below the header, it says "THANK YOU FOR PURCHASING A NETCOMM WIRELESS GATEWAY." and "This Wizard is designed to walk you through the basic information needed to set up your device." It also says "It is highly recommended that you use this wizard, however if you would like to skip straight to the main menu, click on Skip to main menu." and "Would you like to use the first time Setup Wizard?". There are two buttons at the bottom right: "Yes, start the setup wizard" and "No, skip to main menu".

This screen presents two options for setting up the NF18MESH.

Start the Setup Wizard

The Wizard will guide you through a step by step process to set up your device. We recommend that you use this wizard as it covers all the basic settings.

Click the **Yes, start the setup wizard** button to select this option.

See next section, **Setup Wizard**, for a detailed description of the wizard.

Go to the Main Menu

Alternatively, you can use the **Advanced** setup features in the NF18MESH’s user interface.

Click the **No, skip to main menu** button and then click the **Advanced** button to access all the NF18MESH’s settings.

Setup Wizard

The NF18MESH's **Setup Wizard** will open the **INTERNET** connection page. This is indicated on the Wizard's process task line.

INTERNET settings

The **INTERNET** settings prompt you to select the WAN connection type that you will be using and to enter all the parameters required to enable the service.

First select your **INTERNET SERVICE**: **ADSL**, **VDSL** or **Ethernet WAN**

Then select from the available range of **CONNECTION TYPES** for that type of service.

Your ISP (Internet Service Provider) will have advised you which service and connection type you will be using.

ADSL (Asymmetric Digital Subscriber Line) is the most common telephone line internet service for typical consumers. There are a number of variations of ADSL, for example ADSL2 and ADSL2+. For purposes of this manual ADSL refers to all of these related service types.

VDSL (Very-high-bit-rate Digital Subscriber Line) and second-generation VDSL2, are digital subscriber line (DSL) technologies providing data transmission faster than asymmetric digital subscriber line (ADSL). VDSL services may or may not be available from your ISP or in your area. Check with your ISP.

Ethernet WAN services are normally employed when part of the internet connection is cable or fibre optic or other very high-speed services.

ADSL

INTERNET SERVICE

☒ ADSL
 ☐ VDSL
 ☐ Ethernet WAN

ADSL (Asymmetric Digital Subscriber Line) technology supports five **CONNECTION TYPES**:

-  **PPPoE** – The Point-to-Point Protocol over Ethernet.
-  **PPPoA** - Point-to-Point Protocol over ATM. It is available only for ADSL
-  **Dynamic IP** – IP addresses are assigned by the ISP.
-  **Static IP** – Users define IP addresses for each device.
-  **Bridge** – The device relies on the configuration of another gateway on the connection.

Dynamic IP

When the computer/router connects to the internet your ISP will dynamically assign any available IP to it. Therefore, the IP address will change each time a new connection is established.

VPI (Virtual Path Identifier) and **VCI** (Virtual Channel Identifier) are commonly **8** and **35** respectively.

PPPoE

The Point-to-Point Protocol over Ethernet networking protocol encapsulates PPP frames inside Ethernet frames and uses a point to point connection between two Ethernet ports.

Your ISP will advise you of your default PPPoE authentication **Username** and **Password**. Normally you will be given the opportunity to change these to be more secure.

VPI (Virtual Path Identifier) and **VCI** (Virtual Channel Identifier) are commonly **8** and **35** respectively.

Static IP

You must define, or purchase, a set IP address for each device on the network.

VPI (Virtual Path Identifier) and **VCI** (Virtual Channel Identifier) are commonly **8** and **35** respectively.

Contact your ISP for the WAN and DNS servers' details.

PPPoA

Point-to-Point Protocol over ATM (Asynchronous Transfer Mode) employs very small, fixed-length packets, in contrast to PPPoE, which uses relatively large, variable-length packets. PPPoA can be slightly faster than PPPoE.

Your ISP will advise you of your default **Username** and **Password**. Normally you will be given the opportunity to change these to be more secure.

VPI (Virtual Path Identifier) and **VCI** (Virtual Channel Identifier) are commonly **8** and **35** respectively.

Bridge

VPI (Virtual Path Identifier) and **VCI** (Virtual Channel Identifier) are commonly **8** and **35** respectively.

VDSL

INTERNET SERVICE

☐ ADSL ☒ VDSL ☐ Ethernet WAN

VDSL (Very-high-bit-rate digital subscriber line) technology supports four **CONNECTION TYPES**:

-  **PPPoE** – The Point-to-Point Protocol over Ethernet.
-  **Dynamic IP** – IP addresses are assigned by the router.
-  **Static IP** – Users define IP addresses for each device.
-  **Bridge** – The device relies on the configuration of another gateway on the connection.

PPPoE

Your ISP will advise you of your default PPPoE authentication **Username** and **Password**. Normally you will be given the opportunity to change these to be more secure.

VPI (Virtual Path Identifier) and **VCI** (Virtual Channel Identifier) are commonly **8** and **35** respectively.

Static IP

VPI (Virtual Path Identifier) and **VCI** (Virtual Channel Identifier) are commonly **8** and **35** respectively.

Contact your ISP for the WAN and DNS servers' details.

Dynamic IP

VPI (Virtual Path Identifier) and **VCI** (Virtual Channel Identifier) are commonly **8** and **35** respectively.

Bridge

VPI (Virtual Path Identifier) and **VCI** (Virtual Channel Identifier) are commonly **8** and **35** respectively.

Ethernet WAN

INTERNET SERVICE

☐ ADSL
 ☐ VDSL
 ☒ Ethernet WAN

Ethernet WAN (Wide Area Network) technology supports four **CONNECTION TYPES**:

-  **PPPoE** – The Point-to-Point Protocol over Ethernet.
-  **Dynamic IP** – IP addresses are assigned by the router.
-  **Static IP** – Users define IP addresses for each device.
-  **Bridge** – The device relies on the configuration of another gateway on the connection.

PPPoE

Your ISP will advise you of your default PPPoE authentication **Username** and **Password**. Normally you will be given the opportunity to change these to be more secure.

VPI (Virtual Path Identifier) and **VCI** (Virtual Channel Identifier) are commonly **8** and **35** respectively.

Dynamic IP

VPI (Virtual Path Identifier) and **VCI** (Virtual Channel Identifier) are commonly **8** and **35** respectively.

Static IP

VPI (Virtual Path Identifier) and **VCI** (Virtual Channel Identifier) are commonly **8** and **35** respectively.

Contact your ISP for the WAN and DNS servers' details.

Bridge

VPI (Virtual Path Identifier) and **VCI** (Virtual Channel Identifier) are commonly **8** and **35** respectively.

When you have completed the **INTERNET** settings, click the **Next >** button to proceed to the Wizard's **WIRELESS** settings.

WIRELESS settings

The NF18MESH can operate on either 2.4GHz or 5GHz frequencies, or on both. Where both are enabled, select either band when you connect your device.

For a seamless WiFi experience where the system will pick the best wireless radio for your client device, select ☐ **ON** for both the **WIRELESS 2.4GHz** and **WIRELESS 5GHz** options below and ensure that the **Network Names** and **WiFi Passwords** the same for both wireless radios.

WIRELESS 2.4GHz

The 2.4GHz frequency offers better range, particularly if walls or partitions exist but offers less channels and at slower speeds.

Select ☐ **ON** in order to enable 2.4GHz service either in conjunction with 5GHz or on its own.

Select ☒ **OFF** if want only 5GHz service or if you want to disable WiFi entirely – i.e. both 2.4GHZ and 5GHz are turned ☒ **OFF**.

WIRELESS 5GHz

The 5GHz frequency offers higher speed and offers many more channels than 2.4GHz.

However, the 5GHz signal does not penetrate walls, floors, partitions, etc. as well as 2.4GHZ. The 5GHz service works best with nearby devices.

Select ☐ **ON** in order to enable 5GHz either in conjunction with 2.4GHz or on its own.

Select ☒ **OFF** if want only 2.4GHz service or if you want to disable WiFi entirely (turn 2.4GHz ☒ **OFF** too).

The three settings for each frequency (**Network Name**, **Security Key Type** and **WiFi Password**) function in the same manner, there details are as follows.

Network Name

Initially this will be the same as the **WiFi Network Name** printed on the label on the back of the NF18MESH. You can later change this to a more recognisable name that can be easily identified if multiple WiFi connections are available.

Security Key Type

The default **WPA2-PSK (Wi-Fi Protected Access 2 - Pre-Shared Key)** offers high-grade security to home or smaller business networks without the necessity of dedicated security systems and services.

Use the mixed-mode option **WPA-PSK/WPA2-PSK** where you may be connecting devices which are much older than the latest standard, the older devices will access the WiFi network using the older **WPA-PSK** protocol.

We do not suggest selecting **OPEN** as this will leave your network unprotected from intrusion via your WiFi connection, that is anyone within range of your WiFi signal could get into your network.

WiFi Password

Initially this will also be the same as the **WiFi Password** also printed on the label on the back of the NF18MESH. You can later change the password to a more recognisable one either here or later in the Wireless settings page.

PHONE settings

Using the **VoIP (Voice over Internet Protocol)** telephone functionality with the NF18MESH is optional. For heavy telephone usage VoIP services can offer significant cost saving.

If you do not wish to use this service, feel free to skip this step.

Using a phone handset with your router

You can connect one or two phones via the **TEL1** / **TEL2** sockets located at the back of the router. Each phone line is separately defined in the device's configuration. Connect a standard or the base station of your cordless phone directly into the RJ11 sockets.

Phone service

Your ISP will generally pre-configure **TEL1** port to work as the primary telephone port so it connects to their phone network. They will also supply you with your phone number.

If the device is not pre-configured, then you will have to get the SIP details from your ISP and enter them at this stage in the Basic Setup Wizard.

If the configuration is correctly set up and the router is connected to the internet, then the phone should work as soon as its plugged in.

SIP

SIP (Session Initiation Protocol) is a signalling protocol used for initiating, maintaining and terminating real-time voice communication sessions in of Internet telephony.

PHONE LINE settings

Note often ISPs will preconfigure these settings prior to delivery of your NF18MESH gateway.

Otherwise, enter your VoIP service settings (**SIP Username**, **Password**, etc. see table at right) as supplied by your VOIP service provider (VSP).

If you are unsure about a specific setting or have not been supplied information for a particular field, please contact your VoIP service provider to verify if this setting is needed or not

ITEM	DESCRIPTION
Phone Number	Enter the telephone number supplied by your VOIP service provider (VSP).
SIP Username	If not preconfigured, enter the Username supplied by your VSP.
SIP Password	If not preconfigured, enter the Password supplied by your VSP.
SIP Proxy Server	If not preconfigured, enter the IP address of the proxy supplied by your VSP.
SIP Registrar Server	If not preconfigured, enter the IP address of the Registrar Server supplied by your VSP.
SIP Outbound Proxy	If this optional field is required, and if not preconfigured, enter the IP address of the outbound proxy supplied by your VSP. Leave blank if this information is not supplied by your VSP.

Click the **Next >** button to continue to the next step of the Basic Setup Wizard.

GATEWAY SECURITY settings

INTERNET
WIRELESS
PHONE
GATEWAY SECURITY
TIMEZONE
SUMMARY

To help protect the security of your network NetComm Wireless highly encourages you to change the default username and password for accessing your router.

Please keep these details in a secure location, as you will need them to access the user interface of your device.

New Login Username
New Login Password
Confirm Login Password

< Back
Next >

Network Security

The GATEWAY SECURITY settings allow you to improve your security by creating your own account access **Username** and **Password** for logging in to your NF18MESH router.

Important –If you forget your new **Username** and/or **Password**, you can reset the gateway to factory defaults and log in using the original details.

GATEWAY SECURITY settings

ITEM	DESCRIPTION
New Login Username	Username can be up to sixteen (16) characters (letters and/or numbers and/or special character), with one single space allowed. Usernames are case sensitive.
New Login Password	Passwords can be up to sixteen (16) characters (letters and/or numbers and/or special character), NO spaces allowed. Passwords are case sensitive.
Confirm Login Password	Re-enter the New Login Password exactly as entered above.

Click the **Next >** button after making any changes to save and continue.

TIMEZONE settings

Setting the correct timezone selected is necessary for the implementation of **Parental Control** features and any time-based events.

Select the correct timezone for your location from the dropdown menu:

Click the **Next >** button after making any changes to continue.

SUMMARY

Allow the gateway sufficient time (three to four minutes) to establish its connections.

The following status indicators will be populated.

ITEM	DESCRIPTION
Internet Connection	Indicates the status of your chosen Internet Connection . If not ✓ Successful , click on the red or yellow message area to jump back to the INTERNET section of the Wizard to make the appropriate changes.
Phone Line 1 & 2	Indicates the status of either of your optional VoIP Phone Line connections. If not ✓ Successful and you were expecting VoIP service, click on the red or yellow message area to jump back to the PHONE section of the Wizard. You may need to contact your VoIP service provider of ISP for additional setup instructions.
Timezone	Indicates the timezone you selected at the TIMEZONE stage of this Wizard. Click the < Back button twice if you want to change it.
Login Username	The Username used or set to be used to access the gateway.
Login Password	The Password used or set to be used to access the gateway.
Wireless Network (2.4 GHz)	The name of the 2.4GHz network, either assigned by your ISP or created by you at the WIRELESS stage of this Wizard. This will appear in the list of wireless networks that appears when your wireless device scans for available networks. Click the < Back button four times if you want to change it or enable the 2.4GHz network.
Wireless Password (2.4 GHz)	The Password either assigned by your ISP or created by you at the WIRELESS stage of this Wizard to access the 2.4GHZ network. Click the < Back button four times if you want to change it or enable the 2.4GHz network.
Wireless Network (5 GHz)	The same functionality for 5GHZ wireless networks as for 2.4GHz networks described above.
Wireless Password (5 GHz)	The same functionality for 5GHZ wireless networks as for 2.4GHz networks described above.

Internet Connection	✓ Successful
Phone Line 1	✗ Not Registered check settings
Phone Line 2	✗ Not Registered check settings
Timezone	Canberra, Melbourne, Sydney
Login Username	XXXX

Wireless Password (2.4GHz)	XXxx##@xX
Wireless Network (5GHz)	XxxxXxx##
Wireless Password (5GHz)	XXxx##@xX

NF18MESH default settings

The following tables list the default settings for the NF18MESH.

LAN (MANAGEMENT)	
Static IP Address	192.168.20.1
Subnet Mask	255.255.255.0
Default Gateway	192.168.20.1

Table 1 – LAN (Management) table

WIRELESS (WIFI)	
SSID	Refer to the WiFi Network Name printed on the back label of the NF18 MESH
Security	WPA2-PSK (AES)
Security Key	Refer to the WiFi Password printed on the back label of the NF18 MESH

Wireless (WIFI) table

NF18MESH WEB INTERFACE ACCESS	
Username	admin
Password	The unique Password printed on the label on the back of the NF18MESH

NF18MESH WEB Interface Access table

Restore Factory Default settings

To permanently erase all custom user settings and return to factory default settings, click the **Advanced** menu button and select [Configurations](#) from the **System** group.

the

The **Settings** page will open.

Select ☒ **Factory Reset** and then click the **Restore Default Settings** button.

A confirmation message will display. Click **OK** to continue and the NF18MESH will shut down and reboot using the factory default settings.

Close the web user interface and wait for 2 minutes before reopening your web browser.

When you next log in using the default **Username** and **Password** you will be prompted to run the first time **Setup Wizard**.

SUMMARY

Once the NF18MESH has been setup and network connection established, after log in the **SUMMARY** page is displayed.

The main display window contains an interactive network schematic showing system component icons with their current status in orange.

Click on an icon in the schematic to see its details in the component details box.

The **Main Menu** is on the left margin. Click a menu item to open its contents in the main display window.

The **ADVANCED** button will open a more extensive menu from which all the router's functionality can be accessed.

System information such as device name, firmware version and serial number appear in the lower margin.

The task bars also include two direct links to frequently accessed settings pages as well as links to the **Quick Start Wizard** and the NetComm customer support website.

The router can be rebooted directly from this page using the button in the top menu bar.

Click either the **LOG OUT** link or the icon to end your session and close the web interface.

Gateway Information

Gateway Information

System time: Thu Jan 1 02:05:21 1970

Time since last reboot: 0D 2H 5M 21S

Model number: NF18MESH

Firmware version: NF18MESH-NC.AU-R6B019.EN

ITEM	DESCRIPTION
System time	The time retrieved from the NTP (Network Time Protocol) server when ☒ Automatically synchronize with Internet time servers. is selected on the Advanced > System > Internet Time page. If your area observes daylight savings time, ensure that ☒ Enable Daylight Saving Time is selected as well.
Time since last reboot	The time that has elapsed since the last time the gateway was 'rebooted', normally meaning when it was last turned off and then on.
Model number	The full model number of the gateway.
Firmware version	The currently installed firmware version number.

Internet Information

Internet Information

Connection type: Inactive

Line rate - upstream: 0

Line rate - downstream: 0

	IPv4	IPv6
WAN Gateway IP Address	0.0.0.0	
WAN IP Address	0.0.0.0	
Primary DNS Server	0.0.0.0	
Secondary DNS Server	0.0.0.0	

Edit

ITEM	DESCRIPTION
Connection type	The current connection type or status of your connection. The possible Connection types that can be displayed are:  ETH – Ethernet WAN connection  PTM – VDSL connection  ATM – ADSL connection, or  No Connection – no WAN interface set up or no connection to the Internet.
Line rate - upstream	The current speed of data being uploaded from the NF18MESH.
Line rate - downstream	The current speed of data being downloaded into the NF18MESH.
IP Addresses for IPv4 and IPv6	
WAN Gateway IP Address	IP address of the WAN Gateway
WAN IP Address	IP address of the WAN
Primary DNS Server	IP address of the Primary DNS Server
Secondary DNS Server	IP address of the Secondary DNS Server

For more information on Internet connections, including how to create new ones and edit existing ones, refer to the **INTERNET** section on page 28.

 ADVANCED

Internet Service Information

Below is a list of the current internet Interfaces on your router, to view, edit or delete these interfaces, click on the **Description** name below. To setup a new internet connect click the **Create New** button below. Note: Only 8 WAN connections are supported.

Current Connections

Description	Internet Service	Connection Type	VLAN ID
ETH WAN	ETH WAN	Dynamic IP	N/A
ADSL 8_35	ADSL	PPPoA	N/A

Create New

The following information is provided for each connection:

ITEM	DESCRIPTION
Description	Enter a meaningful name of up to 23 characters, numbers and spaces.
Internet Service	The service type: ADSL, VDSL or Ethernet WAN
Connection Type	The connection type differs depending on the service type.
VLAN ID	Applicable only to VLAN services.

Edit a service

Click on the linked **Description name** to open the **Edit Existing** settings dialog.

Up to eight WAN connections at a time can be deployed.

The available settings are the same when you create a new service, see next.

Edit Existing

Description: (Input 0~32 characters)

Internet Service:
☐ ADSL ☐ VDSL ☒ Ethernet WAN

Connection Type:
☐ PPPoE ☒ Dynamic IP ☐ Static IP ☐ Bridge

802.1P: (0-7)

VLAN Tag: (0-4094)

Update Delete More Options

Create a new connection

This requires a complex explanation because there are three different Service types, each of which has up to four different kinds of connection types.

These have already been partially addressed in the Wizard section.

WIRELESS

The NF18MESH gateway supports both 2.4GHz and 5GHz wireless services.

It is designed to automatically select the optimal WiFi band for your WiFi devices. Note that this auto-select functionality is enabled only when both the 2.4GHz and 5GHz wireless services have exactly the same **Name** and same **Password** set in the above screen.

Alternatively, the NF18MESH gateway can be set up to maintain separate wireless settings for each of the 2.4GHz and 5GHz wireless services. Both services can transmit simultaneously and it is up to each client to decide which service to use. In this case the **Name** and **Password** settings will be different for each wireless service.

You can also create optional **Guest** accounts for the 2.4GHz and/or 5GHz wireless services.

Turn ☒ **On** the service you will use (or both) and enter a recognisable **Name** so that you can identify the service when devices access it.

If the **Authentication** setting is not **Open** or **802.1x** a password is required. We recommend that you change the default password and click **Save** to save the new **Name** and **Password**.

More Settings

Click the **More Settings** button to display all available settings for the selected service. The additional settings for and **5 GHz** are shown on the right.

With the exception of the **Mesh** selector which is only available for the **5 GHz** service, the additional settings available for **2.4 GHz** and **5 GHz** are the same.

ITEM	DESCRIPTION
Frequency (Channel)	Auto is the default settings and is recommended unless you encounter channel overlapping. Select the appropriate channel to correspond with your network settings. All devices in your wireless network must use the same channel in order to work correctly.
Channel Bandwidth	Select the bandwidth for the network: 20MHz, 40MHz, or 80MHz (5GHz only) In high wireless activity/interference environment, reduce the bandwidth to 20MHz for greater stability.
Max. Connected Devices	Enter the maximum number of wireless devices able to simultaneously connect to the wireless network. Usually this is 16 (default setting) for consumer devices.
Device Isolation	Select ☒ On to prevent devices on the wireless network being able to access each other, the wireless devices can only access the Internet. The default ☐ Off setting allows every device connected to the router (wirelessly or by cable) to be considered part of the same local network and can communicate with each other device (e.g. servers, printers, PCs, wireless devices, etc.) on that network. This may result in security issues.
Hide SSID	By default, the NF18MESH broadcasts its service set identifier (SSID), or network name, to nearby computers and other devices. To improve the security of your network, select Hide SSID ☒ On to make it harder to detect.
Mesh	Select ☒ On to enable Mesh services, Select ☐ Off to override all settings and disable Mesh services.
Authentication	Select the Wireless security type to use with the wireless network. The default is WPA2-PSK. The NF18MESH also supports: WPA, WPA-PSK, WPA2, WPA2-PSK Open and 802.1x are unsecure (no password required).
Encryption	Select the type of Encryption suitable for the Authentication type.
Other encryption settings	Depending on the Authentication and Encryption types selected, a range of other settings will display.

WPS Setup

Select **WPS Function** ☒ **On** to enable the optional **WPS** functionality.

WPS Setup

WPS Function:
☒ On
☐ Off

WPS Mode:
☐ Router
☐ Device
☒ Push Button

WPS Connect

ITEM	DESCRIPTION
WPS Mode	☒ Router to connect a wireless device using the Router PIN, see below. ☒ Device to connect a wireless device using the Device's PIN, see below. ☒ Push Button to connect without a PIN using the physical WPS button on the side of the Router.
WPS Connect button	When Router or Device WPS Mode is selected click this button to establish the connection using the PIN you have previously entered. When Push Button is selected you can either use this button or the physical WPS button on the side of the Router.

PHONE

Phone ☒ Line 1 ☐ Line 2 

SIP Username:

SIP Password:

Line Number:

Note: This is also known as Caller ID (CID) number. It is linked to your username and given by your phone (VoIP) provider

Save

More Settings

To connect a phone you will need to use the Tel 1 / Tel 2 ports located at the back of the router.

You can have up to two phone lines each separately defined in the device's configuration. You can connect a standard or cordless phone directly into the RJ11 ports.

Your ISP will generally pre-configure TEL 1 port to work as the primary telephone port so it connects to their phone network. Your ISP will supply you with your phone number. If the device is not pre-configured, then you will have to get the SIP details from your ISP and enter them into the form illustrated here.

If the configuration is correctly set up and the router is connected to the internet, then the phone should work as soon as its plugged in.

ITEM	DESCRIPTION
SIP Username	The username as defined by your ISP
SIP Password	The password supplied by your ISP
Line Number	The telephone number supplied by your ISP.

Note – Each VoIP port can only connect to one VoIP Account service, you cannot use both ports for the same VoIP account.

Line 1

SIP Proxy:

SIP Proxy Port:

SIP Registrar:

SIP Registrar Port:

SIP Outbound Proxy: ☒ Enable ☐ Disable

SIP Outbound Proxy:

SIP Outbound Proxy Port:

Features below can be enabled if it's supported by your Phone provider:

Advanced Calling Features: ☐ Show ☒ Hide

Apply

Click the **More Settings** button to show additional settings for the selected line.

ITEM	DESCRIPTION
SIP Proxy	The IP address of the proxy.
SIP Proxy Port	The port that this proxy is listening on. By default, the port value is 5060.
SIP Registrar	Enter the IP address of the SIP registrar.
SIP Registrar Port	The port that SIP registrar is listening on. By default, the port value is 5060.
SIP Outbound Proxy	Click ☒ Enable if your network service provider requires the use of an outbound proxy. This is an additional proxy, through which all outgoing calls are directed. In some cases, the outbound proxy is placed alongside the firewall and it is the only way to let SIP traffic pass from the internal network to the Internet.
SIP Outbound Proxy	Enter the IP address of the outbound proxy.
SIP Outbound Proxy Port	The port that the outbound proxy is listening on. By default, the port value is 5060.
Show / Hide buttons	For additional Advanced Calling Features that may be supported by your ISP, click ☒ Show . See next section.
Apply button	Click to save and apply any changes.

Additional Features

Features below can be enabled if it's supported by your Phone provider:

Advanced Calling Features: ☒ Show ☐ Hide

Call Waiting: ☒ Enable ☐ Disable

Call Return: ☐ Enable ☒ Disable

Call Transfer: ☒ Enable ☐ Disable

Call Conference: ☐ Enable ☒ Disable

Call Forwarding Unconditionally: ☒ Enable ☐ Disable

Unconditionally Number:

Call Forwarding Busy: ☒ Enable ☐ Disable

Busy Number:

Call Forwarding No Answer: ☒ Enable ☐ Disable

No Answer Number:

Message Waiting Indicator: ☐ Enable ☒ Disable

Do Not Disturb: ☒ Enable ☐ Disable

Apply

ITEM	DESCRIPTION
Advanced Calling Features	Click ☒ Show to display the following Advanced Calling Features that may be supported by your ISP.
Call Waiting	Click ☒ Enable if your VoIP Service Provider has enabled Call Waiting on your SIP account.
Call Return	Click ☒ Enable if your VoIP Service Provider has enabled Call Return on your SIP account.
Call Transfer	Click ☒ Enable if your VoIP Service Provider has enabled Call Transfer on your SIP account and you wish to use this feature.
Call Conference	Click ☒ Enable if your VoIP Service Provider has enabled Call Conferencing on your SIP account and you wish to use this feature.
Call Forwarding Unconditionally	Click ☒ Enable if your VoIP Service Provider has enabled Call Forwarding Unconditionally (i.e. no wait, no busy signal, immediate forwarding) on your SIP account and you wish to use this feature.
Unconditionally Number	Enter the phone number to forward a call to if the primary telephone number is busy.
Call Forwarding Busy	Click ☒ Enable if your VoIP Service Provider has enabled Call Forwarding on your SIP account and you wish to use this feature.
Busy Number	Enter the phone number to forward a call to if the primary telephone number is busy.
Call Forwarding No Answer	Click ☒ Enable if your VoIP Service Provider has enabled Call Forwarding on your SIP account and you wish to use this feature.
No Answer Number	Enter the phone number to forward a call to if the call is not answered.
Message Waiting indicator	Click ☒ Enable if your VoIP Service Provider has enabled MWI (Message Waiting Indicator) on your SIP account and you wish to use this feature.
Do Not Disturb	Click ☒ Enable if your VoIP Service Provider has enabled DND (Do Not Disturb) on your SIP account and you wish to use this feature.
Apply button	Click to save and apply the changes you have made to these settings.

PARENTAL CONTROL

Parental control allows you to create profiles which control access to the internet or specific websites. The profiles can then be assigned to devices connected to the NF18MESH. The access restrictions in the profiles will apply to all users of those devices. The following screen will initially display when **PARENTAL CONTROL** is selected.

Profiles

Profiles define an individual or a group of devices that share the same internet access requirements. These devices could be used by members of a family or groups within a family, e.g. teenagers, pre-schoolers, etc.

Note – Parental Control URL blocking will not block apps used on smartphones such as Twitter or Facebook. The Parental control URL blocking feature may not work with all browsers via HTTPS, or support certain TLS versions.

Examples of profiles defined for a workplace may include managers, HR, finance, warehouse, etc. where each type of employee uses their connected device for similar activities.

Each device connected to the NF18MESH can be associated with one profile in the **Current Profile** list.

If you add a new device and want specific access restrictions for it, **Create** a new profile and **Add** the device to that profile.

Alternatively, if a current Profile has all the necessary restrictions, click the [Edit Devices](#) link for that profile and **Add** the new device from either the **Wired** or **Wireless Devices** drop down menu.

Block Lists

Block lists are groups of websites that access restrictions can be assigned to and grouped in **Block Lists**.

Users must type in keywords or URLs of sites to be blocked. Click on one of the eight **Block Lists** and then click its **Modify** button.

Social Media, **Video Streaming** and **Gaming** are example **Block List** names.

Those names as well as **User Defined 1, 2, 3** etc., can all be changed to something more suitable for your circumstances.

Please note that the Block List function will not work on sites that use the HTTPS protocol.

Access Rules

For each **Current Profile**, click the [Edit Rules](#) for that profile to open the Rules definitions page.

Rules are defined for the device or group of devices included in the Profile, the restrictions available include:

-  Times when internet access is shut off completely
-  Block lists that are turned off completely
-  Designated times when sites in Block lists are not accessible

Rules

The following example shows hypothetical **Rules** defined for a **Teenagers Profile**.

Teenagers

Rules

Rules can be added to block internet access completely (Internet blackout), block access to the websites by category (Category blocking) or block access to website categories based on the time of day (Scheduled blocking.)

Categories

Select the categories you would like to block for this user, then use the drop down lists to select whether they should be blocked permanently (Category block) or only at certain times (Scheduled block).

NOTE: Categories set to Scheduled blocking are applied across all selected time slots and cannot be set individually.

☒ Social Media

Apply Internet Blackout
Apply Scheduled Blocking
Clear
Save

All of the devices connected to the NF18MESH that are accessed by teenagers in a hypothetical household will be added to the **Profile** named **Teenagers**.

Internet Access Off

To prevent late night internet usage the internet access of all devices associated with this profile will be switched off from 11:00pm until 6:00am.

Select the relevant areas of the **Timeslots** table and then click the **Apply Internet Blackout** button.

Apply Internet Blackout

The selected timeslots will be coloured black.

Scheduled Blocking

Scheduled blocking relies on the predefined **Block Lists** being populated with either keywords or the URL of all related websites to be restricted.

Select a block list from the column on the left, then select **Scheduled Blocking** from its drop-down menu, then select the relevant times in the **Timeslots** table and then click the **Apply Scheduled Blocking** button.

Apply Scheduled Blocking

The selected timeslots (7:00pm to 9:00pm in our example) will be coloured light blue and social media, videos and gaming will not be available at those times.

Permanent Blocking

To block all the websites defined in a **Block List** select it from the column on the left, then select **Permanent Blocking** from its drop-down menu and click the **Save** button.

In this example all websites listed in the **Inappropriate Content** block list will be inaccessible at all times.

No visual indicator will appear on the **Select Timeslots** table.

☒ Inappropriate Content

Current Users: ✖ George

Apply

Available Shares

The NF18MESH has one USB port located on the back of the router.

Insert a USB and the following details will display:

USB Device Name – The name given to the USB drive.

USB File System – The NF18MESH supports: FAT16, FAT32, NTFS, EXT2 and EXT3 (Linux).

USB Sharing Support – **Yes** means that the USB's contents can be shared with other devices connected to the NF18MESH. Note that USB ports will only provide 5V 1Amp, if your storage device exceeds this, please use USB power injector hubs.

Sharing Options

UPnP

Universal Plug and Play (UPnP) is a set of networking protocols that can allow networked devices, such as computers, printers, gaming console, WiFi access points and mobile phones to automatically detect each other's presence on the network and establish functional network services for data sharing, communications, and entertainment.

☒ **Enable UPnP** to allow automatic port forwarding configuration detection for your UPnP devices.

DLNA

DLNA (Digital Living Network Alliance) setting allows you to ☒ **Enable** and configure the digital media server. This allows digital media stored on an external USB hard drive connected to the NF18MESH to be accessible to other devices on your network.

Samba (SMB)

☒ **Enable** the Samba Server Message Block (SMB) to access the USB content from other connected devices.

Samba requires authentication. Enter a **Username** and **Password** and click the **Apply** button, the Username will appear in the **Current Users** list.

Multiple Samba users are supported.

To remove a user, click the ✖ button and then click the **OK** button in the confirmation dialog.

Note – Due to heightened security concerns, the most recent versions of some operating systems have disabled SAMBA (SMB) v1 by default. If this applies to your operating system, you may have to enable SAMBA (SMB) v1 on your operating system and then restart before this service will work.

ADVANCED

The **Advanced** page contains eight groups of tools accessing a wide range of specialised settings.

Diagnostics

Monitor the performance of your gateway and troubleshoot its behaviour using a range of tests, real-time statistical analysis and activity logs.

Routing

Configure and control the flow and routing of data in to and out of your gateway.

Management

Enable and configure remote access and control for your gateway in a secure environment and control the LED light display.

Local Network

Access all configuration options for IPv4, IPv6, VLAN and your wireless services.

Phone

View and configure all the advanced features of your VoIP telephones.

System

Keep your system up to date and save your settings.

QoS

Precisely manage packet queues and port access to customise and optimise data flow.

Security

Control access and set up firewalls to prevent intrusion or define filters to allow specific access.

Diagnostics – Information

The top part of the **Diagnostics – Information** page contains **Device Info** such as hardware and software versions, etc. as well as the current status of the WAN connection. The lower part of the page contains **WAN** connection, **Route** and **ARP** (Address Resolution Protocol) details.

Secondary DNS Server: 0.0.0.0

LAN IPv6 ULA Address:

Default IPv6 Gateway:

The first group of **Device info** describes the physical device and details of its hardware and software.

ITEM	DEFINITION
Manufacturer	Indicates that NetComm Wireless is the manufacturer of this product.
Product Class	The model of the product.
Serial Number	The unique set of numbers assigned to the routers for identification purposes.
Build Timestamp	The date and time that the software running on the router was published.
Software Version	The current firmware version installed on the router.
Bootloader (CFE) Version	The current boot loader version installed on the router.
DSL PHY and Driver Version	The driver version of the on-board DSL chip.
VDSL PROFILE	The VDSL profile in use. NF18MESH supports 8a, 8b, 12a and 17a VDSL profiles.
DSL PHY and Driver Version	The current line driver installed on the router.
Wireless Driver Version	The current wireless driver installed on the router.
Voice Service Version	“Voice” is the only option currently available.
Uptime	The number of days, hours and minutes that the router has been running.

The second group displays details of the current status of your WAN connection.

ITEM	DESCRIPTION
Line Rate – Upstream (Kbps)	The current synchronisation upstream speed of the DSL

WAN

Further down on the page the **WAN** table shows more detailed information related to the WAN interface configuration, including the firewall status, IPv4 and IPv6 addresses of the router.

	connection in Kbps (Kilobits per second).
Line Rate – Downstream (Kbps)	The current synchronisation upstream speed of the DSL connection in Kbps (Kilobits per second).
LAN IPv4 Address	The current IPv4 LAN IP address assigned to the router.
Service connection type	Displays whether the WAN connection is ADSL/VDSL or Ethernet WAN.
Default Gateway	The current default gateway address of the WAN interface.
Primary DNS Server	The current primary DNS server in use
Secondary DNS Server	The current secondary DNS server is use.
LAN IPv6 ULA Address	The current IPv6 LAN IP address in use if assigned.
Default IPv6 Gateway	The current IPv6 default gateway if assigned.
Date/Time	The current local date and time set on the router.

WAN													
Interface	Description	Type	VLAN Mux ID	IPv6	IGMP Pxy	IGMP Src Enbl	MLD Pxy	MLD Src Enbl	NAT	Firewall	Status	IPv4 Address	IPv6 Address
ppp0a0	ADSL_8_35	PPPoA	Disabled	Disabled	Enabled	Disabled			Enabled	Enabled	Unconfigured	0.0.0.0	

ITEM	DEFINITION
Interface	The Interface of the WAN connection.
Description	The description of the WAN connection.
Type	The type of WAN connection.
VLAN Mux ID	Details the status of VLAN Mux ID, if used.
IPv6	The status of IPv6.
IGMP Pxy	Details the status of IGMP on each WAN connection. IGMP is only used with IP v4 connections. IGMP proxy enables the router to issue IGMP host messages on behalf of hosts that the router discovered through standard IGMP interfaces, allowing NAT transversal of Multicast traffic.
IGMP Source Enable	Details the status of IGMP Src on each WAN connection. IGMP Sources function send a membership report that includes a list of IGMP source addresses.
MLD Pxy	Shows the status of the Multicast Listener Discovery protocol when IPv6 is in use. Multicast Listener Discovery (MLD) proxy enables the router to issue MLD host messages on behalf of hosts that the router discovered through standard MLD interfaces.

WAN – continued

ITEM	DEFINITION
MLD Source	Details the status of MLD Src on each WAN connection.

ARP

The **ARP** table displays address resolution protocol information.

Enable	MLD Sources function can send a membership report that includes a list of MLD source addresses.
NAT	The NAT status of the WAN connection.
Firewall	The status of the router firewall across the WAN connection.
Status	The status of the WAN connection.
IPv4 Address	The current IP v4 address of the WAN interface.
IPv6 Address	The current IP v6 address of the WAN interface.

Route

The second table displays details of displays any routes that the router has created.

Route						
Flags: U - up, ! - reject, G - gateway, H - host, R - reinstate, D - dynamic (redirect), M - modified (redirect).						
Destination	Gateway	Subnet Mask	Flag	Metric	Service	Interface
192.168.20.0	0.0.0.0	255.255.255.0	U	0		br0

ARP			
IP address	Flags	HW Address	Device
192.168.20.2	Complete	ec:08:6b:02:aa:0a	br0

This option can be used to determine which IP address / MAC address is assigned to a particular host.

This can be useful when setting up URL filtering, Time of Day filtering or Static DHCP addressing.

Diagnostics – Statistics

The **Diagnostics – Statistics** page contains tables and charts displaying details of LAN communications, WAN services, xTM and XDSL interfaces and physical memory usage and the workload of the CPU.

The **Statistics – xDSL** page shows details related to the DSL (Digital Subscriber Line) interface of the router.

CPU & Memory

The **Statistics – CPU & Memory** page shows real-time graphs charting the physical memory usage and the workload of the CPU.

Diagnostics – Troubleshooting

The **Diagnostics – Troubleshooting** page contains a number of predefined tests with test results and other diagnostic settings.

Troubleshooting

- Information
- Statistics
- Troubleshooting**
- Logs

Your modem is capable of testing your DSL connection. The individual tests are listed below. If a test displays a fail status, click "Test" again to make sure the fail status is consistent. If the test continues to fail, click "Help" and follow the troubleshooting procedures

Test the connection to your local network

Test your eth0 Connection:	Fail	Help
Test your eth1 Connection:	Fail	Help
Test your eth2 Connection:	Fail	Help
Test your eth3 Connection:	Pass	Help
Test your eth4 Connection:	Fail	Help
Test your Wireless Connection Test:	Pass	Help

Test the connection to your DSL service provider

Test xDSL Synchronization:	Fail	Help
ATM OAM F5 segment ping Test:	Disabled	Help
Test ATM OAM F5 end-to-end ping:	Disabled	Help

Test the connection to your Internet service provider

Test PPP server connection:	Disabled	Help
Test authentication with ISP:	Disabled	Help
Test the assigned IP address:	Disabled	Help
Ping default gateway:	Fail	Help
Ping primary Domain Name Server:	Fail	Help

Test

Test With OAM F4

Connection tests

This group contains the results of fourteen tests of various aspects of your connection to your local network, the connection to your DSL service provider, and the connection to your Internet service provider.

Note – Your Internet service provider must support diagnostics features in order for correct DSL diagnostics results.

Diagnose the connection by clicking the **Test** button or click the **Test With OAM F4** button.

The following results indicator buttons will display for each test:

A Pass icon displays when the connection is operating correctly.

Click [Help](#) to see the criteria for success for this test.

A Fail icon indicates that the test was unsuccessful.

Click [Help](#) to see the possible reasons for the failure.

In the Help screen there are also Troubleshooting suggestions specific to that particular type of test which may be able to rectify the problem.

Click the **Rerun Diagnostic Tests** button after the troubleshooting has been completed.

The service is either disabled by a setting in your NF18MESH or that diagnostic functionality is not supported by your ISP.

If after trying all the troubleshooting suggestions you are still experiencing a fail condition, contact your ISP Technical Support.

Ethernet OAM

The Ethernet OAM page provides administrators with operation, administration and management features.

The screenshot shows the 'Ethernet OAM' configuration page. It has a title bar 'Ethernet OAM'. Below it, there are two sections: 'Ethernet Link OAM (802.3ah)' and 'Ethernet Service OAM (802.1ag / Y.1731)'. Each section has an 'Enable' checkbox, both of which are checked. At the bottom, there are radio buttons for '802.1ag' (selected) and 'Y.1731'. An 'Apply/Save' button is at the bottom right.

Ping Diagnostic

The ping test lets you ping a remote IP address or hostname in order to test the connection.

The screenshot shows the 'Ping Diagnostic' form. It has a title bar 'Ping Diagnostic'. Below it, there is a text area with the instruction: 'Please type in a host name or an IP Address. Click Submit to check the connection automatically.' Below this is a text input field labeled 'Host Name or Ip Address:' containing 'www.yahoo.com'. At the bottom are 'Submit' and 'Cancel' buttons.

To ping, type in a **Host Name** or **IP Address** and click the **Submit** button.

Traceroute Diagnostic

Perform a trace route to a remote IP address or host name, to ensure that the correct interface is used for routing.

The screenshot shows the 'Traceroute Diagnostic' form. It has a title bar 'Traceroute Diagnostic'. Below it, there is a text area with the instruction: 'Please type in a host name or an IP Address. Click Submit to trace the route.' Below this is a text input field labeled 'Host Name or Ip Address:' containing 'www.yahoo.com'. At the bottom are 'Submit' and 'Cancel' buttons.

To trace a route, type in a **Host Name** or **IP Address** and click the **Submit** button.

Start/Stop DSL

This tool advises you of your DSL connection status: **Up** or **Down**

If you DSL connection is down, check whether your phone line is connected.

The screenshot shows the 'Start/Stop DSL' status page. It has a title bar 'Start/Stop DSL'. Below it, there is a text area with the instruction: 'This page enables you to start or stop your DSL line.' Below this, it says 'Your DSL connection is up.' At the bottom are 'Start' and 'Stop' buttons.

Use the **Stop** or **Start** button to turn on or off the DSL service for troubleshooting purposes.

Diagnostics – Logs

The **System Log** page allows you to view the log of the NF18MESH and configure the logging options.

here to save Security Log to a file.' At the bottom are two buttons: 'View' and 'Reset'." data-bbox="48 227 514 601"/>

Security Log

Click the **View** button to display the security log.
It contains details of login attempts to the gateway.

Click the **Reset** button to clear the existing records from the log and reset the **Security Log** to record login attempts from this point forward..

Message
1970-01-01T22:19:30+00:00 ID 3: Authorized login success.:U admin:N HTTP:P 80:IP 192.168.20.2
1970-01-01T22:51:20+00:00 ID 3: Authorized login success.:U admin:N HTTP:P 80:IP 192.168.20.2
1970-01-01T23:03:12+00:00 ID 3: Authorized login success.:U admin:N HTTP:P 80:IP 192.168.20.2

System Log

To view the system log as it is currently configured, click the **View System Log** button.

Date/Time	Facility	Severity	Message
Jan 1 21:26:53	kern	crit	kernel: eth1 (Ext switch port: 1) (Logical Port: 9) Link UP 1000 mbps full duplex
Jan 1 21:26:59	kern	crit	kernel: eth1 (Ext switch port: 1) (Logical Port: 9) Link DOWN.
Jan 1 21:27:03	kern	crit	kernel: eth1 (Ext switch port: 1) (Logical Port: 9) Link UP 1000 mbps full duplex

The results are displayed in a table in which each log record contains the following data fields: **Date/Time** stamp, **Facility**, **Severity** and a **Message**

The range of messages displayed can be defined, click the **Configure System Log** button to access the display settings.

Save Security Log to file

Click the [here](#) link to save the current log file to a .txt file.
The file will initially open in a browser page, click to save as a .txt file.

Configure a System Log

To configure the system log, click the **Configure System Log** button.

When the desired values are selected click **Apply/Save** to configure the system log options.

System Log – Configuration

If the log mode is enabled, the system will begin to log all the selected events. For the Log Level, all events above or equal to the selected level will be logged. For the Display Level, all logged events above or equal to the selected level will be displayed. If the selected mode is 'Remote' or 'Both,' events will be sent to the specified IP address and UDP port of the remote syslog server. If the selected mode is 'Local' or 'Both,' events will be recorded in the local memory.

Select the desired values and click 'Apply/Save' to configure the system log options.

Log: ☐ Disable ☒ Enable

Log Level:

Display Level:

Mode:

Server IP Address:

Server UDP Port:

ITEM	DESCRIPTION
Log	When enabled the system will begin to log all the selected events.
Log Level Emergency Alert Critical Error Warning Notices Informational Debugging	The Log Level drop down list is arranged from most critical at the top (Emergency), the lowest level event at the bottom (Debugging). Select a Log Level and all events above or equal to the selected level will be logged to a log file. For example: If you select Error as your Log Level, all Emergencies, Alerts, Critical events and Error messages will be included in the log file. Warnings, Notices, Informationals and Debugging messages will not be logged.
Display Level	Select a Display Level and, all logged events above or equal to the selected level will be displayed on the System Logs page. The range displayed is set using the same settings as described for the Log Level settings, see previous item. To view the System Logs page, click the View System Log button on the Logs page: View System Log
Mode	The default setting, Local, saves the log only to the local memory on the NF18MESH. The Remote mode allows you to save the log on a remote server. If the selected mode is Remote you must specify the IP address and UDP port of the remote syslog server to which the log will be sent. If Both is selected you must specify the IP address and UDP port of the remote syslog server and events will be recorded in the local memory as well as the remote server.
Server IP Address	Specify the IP address of the remote syslog server. (Remote and both only.)
Server UDP Port	Specify the UDP port of the remote syslog server. (Remote and both only.)

Routing – NAT

The **Routing – NAT** page contains three sections **Port Forwarding**, **DMZ Host** and **ALG**.

Port Forwarding

NAT

Port Forwarding

Port Forwarding allows you to direct incoming traffic from WAN side (identified by Protocol and External port) to the Internal server with private IP address on the LAN side. The Internal port is required only if the external port needs to be converted to a different port number used by the server on the LAN side. A maximum 32 entries can be configured.

Server Name	External Port Start	External Port End	Protocol	Internal Port Start	Internal Port End	Server IP Address	WAN Interface	LAN Loopback	Action	Delete
Add										

Port forwarding allows you to direct incoming traffic from the WAN side to the Internal network host with a private IP address on the LAN side.

The table on the **Port Forwarding** page contains details of each Port Forwarding rule currently defined. You can define up to 32 rules

ITEM	DEFINITION
External Port Start	The starting external port number (when custom server is selected). When a service is connected this field will be completed automatically.
External Port End	The ending external port number (when custom server is selected). When a service is connected this field will be completed automatically.
Protocol	Options include: TCP , UDP or TCP/UDP
Internal Port Start	The starting internal port number (when custom server is selected). When a service is connected this field will be completed automatically.
Internal Port End	The ending internal port number (when custom server is selected). When a service is connected this field will be completed automatically.

ITEM	DEFINITION
Server IP Address	The IP address of the local server.
WAN Interface	Describes the type of target interface: ETH, WAN, VDSL, custom, etc.
WAN Loopback	Indicates current WAN Loopback status: Enabled or Disabled
Action buttons	Toggle between: Enable and Disable
Delete button	Click the Delete button to permanently remove a Port Forwarding rule.
Add button	Click Add to open the Add Virtual Servers page.

Click the **Add** button to create new Port Forwarding rules, see next page.

Add Port Forwarding Rule

Select the service name, and enter the server IP address and click "Apply/Save" to forward IP packets for this service to the specified server.

NOTE: The "Internal Port End" cannot be modified directly. Normally, it is set to the same value as "External Port End". However, if you modify "Internal Port Start", then "Internal Port End" will be set to the same value as "Internal Port Start".

Remaining number of entries that can be configured: 32

Use Interface:

Service Name:

LAN Loopback:

Server IP address:

Status:

External Port Start:

External Port End:

Protocol:

Internal Port Start:

Internal Port End:

Apply/Save

Close

ITEM	DEFINITION
Use Interface	The interface type to be used by the rule.
Service Name	Enter a descriptive name for the service that the rule will apply to.
LAN Loopback	Select Enable to allow the LAN host to access another LAN host/server via the external IP Address of the gateway. When Disable is selected you must use the internal IP address of the device when on the LAN side.
Server IP Address	Enter the IP address of the local server/host.
Status	Select Enable to allow the rule to be accessible. Select Disable to save the rule in an inactive state.
External Port Start	Enter the starting internal port number range (when custom server is selected). When a predefined service is selected this field will be completed automatically.
External Port End	Enter the ending internal port number range (when custom server is selected). When a predefined service is selected this field will be completed automatically.
Protocol	The options are: TCP , UDP or TCP/UDP
Internal Port Start	Enter the starting internal port number range (when custom server is selected). When a predefined service is selected this field will be completed automatically.
Internal Port End	Enter the ending internal port number range (when custom server is selected). When a predefined service is selected this field will be completed automatically.
Apply/Save button	Click to save and enable the rule. Up to 32 rules can be defined.

DMZ Host

DMZ Host

The Broadband Router will forward IP packets from the WAN that do not belong to any of the applications configured in the Virtual Servers table to the DMZ host computer.

Enter the computer's IP address and click 'Apply' to activate the DMZ host.

Clear the IP address field and click 'Apply' to deactivate the DMZ host.

DMZ Host IP Address:

☒ Enable LAN Loopback

Apply/Save

The NF18MESH will forward IP packets from the Wide Area Network (WAN) that do not belong to any of the applications configured in the Virtual Servers table or being used in the Virtual Server table to the DMZ host.

Enter the **DMZ Host IP address** and click **Apply** to activate the DMZ host. To deactivate the DMZ Host function, clear the IP address field and press the **Save/Apply** button.

Enable LAN Loopback

Note that ☒ **Enable LAN Loopback** can also be selected.

LAN Loopback allows the LAN host to access another LAN host/server via the external IP Address of the router.

Without NAT loopback you must use the internal IP address of the device when on the LAN side.

Important – This will present your DNZ device to the Internet without a router firewall.
This may create a security risk.

ALG

Select the ALG below.

- ☒ FTP Enable
- ☒ SIP Enable
- ☒ TFTP Enable
- ☒ H323 Enable
- ☒ IRC Enable
- ☒ Port Triggering Enable
- ☒ PPTP Enable
- ☒ IPSec Enable
- ☒ RTSP Enable
- ☐ SNMP Enable

Apply/Save

The **Application Layer Gateway (ALG)** features enables the router to parse application layer packets and support address and port translation for certain protocols.

We recommend that you leave these protocols enabled unless you have a specific reason for disabling them.

ITEM	DEFINITION
☒ FTP Enable	Select to allow File Transfer Protocol (FTP) services.
☒ SIP Enable	Session Initiation Protocol (SIP) is a signalling protocol used by communications applications and services between two or more endpoints on IP networks.
☒ TFTP Enable	Select to allow Trivial File Transfer Protocol (TFTP) services. TFTP provides a simpler file transfer protocol that FTP using UDP, without user authentications, etc..
☒ H323 Enable	H.323 is a protocol standard for multimedia communications that supports real-time transfer of audio and video data over packet networks like IP.
☒ IRC Enable	Internet Relay Chat (IRC) is an application layer protocol that facilitates communication in the form of text.
☒ Port Triggering Enable	Port Triggering is a configuration option on NAT-enabled routers that provides access to services outside the network or on the Internet.
☒ PPTP Enable	Point-to-Point Tunnelling Protocol (PPTP) is protocol used to implement virtual private network.
☒ IPSec Enable	Internet Protocol Security (IPsec) is a secure network protocol suite that authenticates and encrypts the packets of data sent over an IPv4 network.
☒ RTSP Enable	Real Time Streaming Protocol (RTSP) is a network control protocol designed to establish and control streaming media sessions in entertainment and communications applications.
☒ SNMP Enable	Simple Network Management Protocol (SNMP) is an application-layer protocol used to manage and monitor network devices and their functions in a local area network (LAN) or wide area network (WAN).

Click the **Apply / Save** button to apply the changes to the settings.

Routing – Routing

The **Routing – NAT** page contains two sections **Static Route** and **RIP Configuration**

Static Route

The **Static Route** table displays a list of the configured static routes.

Click the **Add** or **Delete** buttons to add or remove static route definitions.

ITEM	DEFINITION
IP Version	Select ☒ IPv4 or ☐ IPv6.
Destination IP/Mask	Enter the Destination Network Address and its subnet mask .
Gateway	Enter the Gateway IP Address and/or an available WAN Interface .
Interface	
Metric	The Metric field is used to set a priority for this route, the lower the number the higher the priority.
Delete	Select a Static Route row in the table and click the Delete button to permanently delete that Static Route definition.
Add button	Click the Add button to create a new Static Route definition, see the Add Static Route screen on right.

Add Static Route

Add Static Route

Enter the destination network address, subnet mask, gateway AND/OR available WAN interface then click "Apply/Save" to add the entry to the routing table.

IP Version: ☒ IPv4 ☐ IPv6

Destination IP address/prefix length:

Interface:

Gateway:

Metric: (optional: metric number should be greater than or equal to zero)

Apply/Save

Close

RIP Configuration

The **Routing Information Protocol (RIP)** allows routers to exchange network topology information.

This information allows the automatic creation and updating of routing tables.

ITEM	DEFINITION
Interface	The network interface that the RIP settings apply to.
Version	1 – Use RIPv1 to support classful routing. 2 – Use RIPv2 to support subnet information gathering and Classless Inter-Domain Routing. Both – RIP will use both RIPv1 & RIPv2, and will multicast and broadcast to all adjacent routers.
Operation	Passive – RIP will only respond to “Request Message” queries on the RIP enabled interface. Active – RIP will broadcast and respond to “Request Message” queries on the RIP enabled interface.
Enabled	Select Enable to activate the RIP routing service on the selected Interface .
Apply/Save button	Click the Apply/Save button to save the changes and to initiate the change.

RIP Configuration

Note: RIP cannot be configured on the WAN interface which has NAT enabled (such as PPPoE).

To activate RIP for the WAN Interface, select the desired RIP version and operation and place a check in the “Enabled” checkbox. To stop RIP interface, uncheck the “Enabled” checkbox. Click “Apply/Save” button to Start/Stop RIP and save the configuration.

Interface	Version	Operation	Enabled
eth4.1	2	Passive	Enable

Apply/Save

Attention – RIP cannot be selected for a WAN interface which is NAT enabled, such as PPPoE.

Go to **Basic Setup** and select **Ethernet WAN**, click **Next** and then select **IP over Ethernet (IPoE)**. The RIP option will now be available.

Routing – DDNS

Routing

- NAT
- Routing
- DDNS**

Dynamic DNS

The Dynamic DNS service allows you to alias a Dynamic IP address to a static hostname in any of the many domains, allowing your Broadband Router to be more easily accessed from various locations on the Internet.

HostName	UserName	Service	Interface	Delete
abc.com	uid@example.com	DynDNS.org	ADSL	Delete

[Add](#)

When you have an Internet plan that provides a dynamic IP address (i.e. an IP address which is dynamically assigned and changes each time you connect), an easy way to provide a permanent address is to use a **Dynamic DNS** service.

There are both free and paid DDNS services available.

ITEM	DEFINITION
D-DNS provider	When adding a Dynamic DNS server, see right, select your DDNS service provider from the D-DNS provider drop down menu The provider's name will display in the Service column in the Dynamic DNS services list.
Hostname	Enter the dynamic DNS Hostname .
Interface	Select the interface that the service operates on from the Interface drop down menu.
Username / Password	Enter the Username and Password of your dynamic DNS account. The Username will display in the Dynamic DNS services list.
Delete	Click the Delete button to permanently remove the DDNS service from the list.
Add button	Click the Add button to create a new DDNS service to include in the list.

Add Dynamic DNS service

Add Dynamic DNS

This form allows you to add a Dynamic DNS address from DynDNS.org or TZO.

D-DNS provider:

Hostname:

Interface:

DynDNS Settings

Username:

Password:

[Apply/Save](#) [Close](#)

To edit an existing DDNS service, click on its **Hostname** from the Dynamic DNS list. The **Edit Dynamic DNS** page appears. Make the changes and click the **Apply/Save** button.

Management – TR-069 Client

TR-069 Client

Management

- [TR-069](#)
- SNMP Agent
- Passwords
- LED Control

WAN Management Protocol (TR-069) allows a Auto-Configuration Server (ACS) to perform auto-configuration, provision, collection, and diagnostics to this device.

Select the desired values and click "Apply/Save" to configure the TR-069 client options.

☐ Enable WAN Management Protocol (TR-069)

TR-069 enables provisioning, auto-configuration or diagnostics to be automatically performed on your router if supported by your Internet Service Provider (ISP).

Inform ☒ Enable ☐ Disable

Inform Interval:

ACS URL:

ACS Username:

ACS Password:

WAN Interface used by TR-069 client:

Display SOAP messages on serial console ☐ Enable ☒ Disable

☐ Connection Request Authentication

Important – Changing or removing these settings may cause you to lose ISP remote support and automatic firmware upgrade services.

Select ☒ **Enable WAN Management Protocol (TR-069)** to display the TR-069 settings.

ITEM	DEFINITION
Inform	Set to enable to TR-069 client inform session initialization.
Inform interval	Time in seconds that inform session data is sent to the Auto-Configuration Server (ACS).
ACS URL	The address where the ACS server is located.
ACS Username	The user name to access the ACS server.
ACS Password	The password to access the ACS server.
WAN Interface used by TR-069 Client	The interface connection used to send and receive data to the ACS server.
Display SOAP messages on serial console	Select ☒ Enable to view the SOAP messages on a command prompt screen.

Connection Request Authentication

☒ Connection Request Authentication

Connection Request Username:

Connection Request Password:

Connection Request Port:

Connection Request URL:

Apply/Save button	Click to save your settings and start the TR-069 services.
Get RPC Methods button	Click to retrieve Remote Procedure Call (RPC) Methods .

Normally TR-069 sessions are initiated by the NF18MESH, however sometimes there is a need for a remote auto configuration server (ACS) to request that the NF18MESH contact it immediately, effectively initiating the session. To do this, TR-069 defines a Connection Request mechanism in CWMP, which allows the ACS to stimulate the NF18MESH to begin a session.

To ensure appropriate security, this request must be authenticated using a **Username** and **Password**.

Select ☒ **Connection Request Authentication** to display the TR-069 security and connection settings.

ITEM	DEFINITION
Connection Request Username	Enter the username to be used by the ACS to initiate the connection for a TR-069 session with the NF18MESH.
Connection Request Password	Enter the password to be used by the ACS to initiate the connection for a TR-069 session with the NF18MESH.
Connection Request Port	Enter the Port number to be used by the ACS when connecting to the NF18MESH for a TR-069 session.
Connection Request URL	Enter the URL address to be used by the ACS for a TR-069 session with the NF18MESH.

Management – SNMP Agent

The Simple Network Management Protocol (SNMP) allows a network administrator to monitor a network by retrieving settings on remote network devices.

To do this, the administrator typically runs an SNMP management station program such as MIB browser on a local host to obtain information from the SNMP agent, in this case the NF18MESH (if SNMP is enabled).

An SNMP 'community' performs the function of authenticating SNMP traffic.

A 'community name' acts as a password that is typically shared among SNMP agents and managers.

SNMP Agent

Management

- TR-069
- SNMP Agent**
- Passwords
- LED Control

Simple Network Management Protocol (SNMP) allows a management application to retrieve statistics and status from the SNMP agent in this device.

Select the desired values and click 'Apply' to configure the SNMP options.

SNMP Agent ☒ Disable ☐ Enable

Read Community:

Set Community:

System Name:

System Location:

System Contact:

Trap Manager IP:

Apply/Save

ITEM	DEFINITION
SNMP Agent	Select ☒ Enable to start this service.
Read Community	Enter the password to read device SNMP values or accept the default: public
Set Community	Enter the password to sset device SNMP values or accept the default: private
System Name	Enter a recognisable system name or accept the default: NF18MESH
System Location	Enter a system location or accept the default: unknown
System Contact	Enter a system location or accept the default: unknown
Trap Manager IP	Enter the IP address of the trap manager.
Save/Apply button	Click to save your settings and start the SNMP service.

Management – Passwords

Passwords

- Management
- TR-069
- SNMP Agent
- Passwords
- LED Control

Use the fields below to change credentials.

Enter up to 16 characters for each field and click 'Apply/Save'.

Note: Username or Password cannot contain a space or symbols.

Username:

New Username:

Old Password:

New Password:

Confirm Password:

Apply/Save

ITEM	DEFINITION
Username	Enter the Username that you are currently logged in with.
New Username	Enter a new username consistent with the requirements and restrictions, see above.
Old Password	Enter the password that you are currently logged in with.
New Password	Enter a new password consistent with the requirements and restrictions, see above.
Confirm Password	Re-enter the new password exactly as in the previous field.
Save/Apply button	Click to save your settings and start the SNMP services.

Requirements

- Both username and password can be between 1 to 16 characters.
- Characters can be either letters, numerals and/or special characters.
- Letters are case-sensitive.

Restrictions

- Usernames and passwords cannot exceed 16 characters in length.
- They must not include spaces or punctuation marks.
- Characters cannot be symbols.

Management – LED Control

LED Control

Management

- TR-069
- SNMP Agent
- Passwords
- LED Control

You can turn on or turn off LED lights in here.

Select the desired values and click 'Apply' to configure the LED lights.

LED Settings ☒ On ☐ Off

Apply/Save

In some locations the LED lights on the front of the NF18MESH may cause an unwanted distraction, for example in a small apartment or bedroom.

Use the **LED Control** settings to switch the display of the LED lights on or off.

ITEM	DEFINITION
☒ On	Select ☒ On to enable the display of the LED lights. If the LED lights are currently off, click the Save/Apply button for this change to take effect.
☐ Off	Select ☐ Off to turn off the display of the LED lights. If the LED lights are currently on, click the Save/Apply button for this change to take effect.
Save/Apply button	Click to save and apply the settings made above. Note that it will take a few seconds for the change to take effect.

LAN

Local Area Network – IPv4

Local Area Network

Local Network

- LAN
- Wireless

☒ IPv4
 ☐ IPv6
 ☐ VLAN

IPv4 LAN Auto Configuration

Configure the Broadband Router IP Address and Subnet Mask for LAN interface.

IP Address:

Subnet Mask:

DHCP: ☒ On ☐ Off

DHCP Start Range:

DHCP End Range:

Primary DNS Server:

Secondary DNS Server:

DHCP Lease Time (Hour):

☒ Enable IGMP Snooping

☐ Standard Mode ☒ Blocking Mode

Enable IGMP LAN to LAN Multicast:

LAN to LAN Multicast is enabled until the first WAN service is connected, regardless of this setting.

☐ Enable LAN side firewall

☐ Enable DHCP Server Relay

DHCP Server IP Address

Apply

Cancel

Select ☒ **IPv4** to configure this service.

ITEM	DEFINITION
IP Address	Enter the Local IP Address to use for the NF18MESH.
Subnet Mask	Enter the subnet mask to define the subnet of the Local Network.
DHCP	Select ☒ On to enable the DHCP server.
DHCP Start Range	Enter the start IP address for the DHCP IP Address pool.
DHCP End Range	Enter the end IP address for the DHCP IP Address pool.
Primary DNS Server	Enter the IP address of the primary DNS server.
Secondary DNS Server	Enter the IP address of the secondary DNS server.
DHCP Lease Time (Hour)	Assigned IP addresses will be dropped after this time period and the address may be assigned to a different device on the network. Default is 24 hours.
☒ Enable IGMP Snooping	Enable IGMP (Internet Group Management Protocol) Snooping and select the IGMP Snooping mode to use. ☒ Standard Mode – Allows all multicast traffic to LAN clients. ☒ Blocking Mode – Only allows multicast subscribed clients to receive multicast packets.
Enable IGMP LAN to LAN Multicast	Select Enable to allow IGMP snooping to multicasting between LAN side clients. Select Disable to turn off this functionality.
☒ Enable LAN side firewall	Enable the LAN side firewall to restrict traffic between LAN host-LAN hosts and WiFi clients.
☒ Enable DHCP Server Relay	Disable the DHCP server defined above and relay requests to the external server

DHCP

Static IP Lease list:

(A maximum 32 entries can be configured)

MAC Address	IP Address	Delete
B7:23:48:5E:D1:12	192.168.20.2	Delete

Add Entries

DHCP Option Setup:

Code (1-254)	Value (255)	Address Pool	Enabled	Delete
10	255	Default	Enable	Delete

Add

	specified in the DHCP server IP address text box.
DHCP Server IP Address	When you select ☒ Enable DHCP Server Relay this text box becomes available. Enter the address of the external DHCP server that you want to use instead of the DHCP server specified above. Note that it is no longer available.
Apply button	Click to save your settings and start the SNMP services.

Use the **DHCP Static IP Lease** facility to reserve DHCP Addresses for specific hosts.

Click the **Add Entries** button to open the **DHCP Static IP Lease** dialog.

Enter the **MAC Address** of the chosen host and **Static IP Address** and the click the **Apply/Save** button.

Up to 32 **Static IP Leases** can be created and managed at the same time.

To manage you lease list, click the **Delete** button to permanently remove a lease from the list.

Click the **Add** button to open the **DHCP Option Setup** dialog.

Select the **State** as ☒ **Enable** to allow custom DHCPcodes.

If the **State** as ☐ **Disable** the option will remain in the list, but no be active.

Enter a **Code** of 1 to 254.

Enter a **Value**, maximum length is 255.

Click the **Apply/Save** button to apply and save the changes.

To manage you option list, click the **Delete** button to permanently remove an option from the list.

DHCP Port Setup

Enable or Disable DHCP for every interface.

You must enable lan ports.

Dynamic Host Configuration Protocol (DHCP) is a protocol for assigning IP addresses to devices on a network automatically. Devices may be assigned a different IP address every time it connects to the NF18MESH network. DHCP port Setup can limit the DHCP service to a specific physical interface on the NF18MESH.

Dynamic IP Addresses

By default, all physical interface on the NF18MESH have **DHCP** services ☒ **Enabled**.

Static IP Addresses

It is possible to set a "static" IP addresses which will never change.

Local Area Network – IPv6

Local Network

- LAN
- Wireless

☐ IPv4
 ☒ IPv6
 ☐ VLAN

IPv6 LAN Auto Configuration

1: Stateful DHCPv6 is supported based on the assumption of prefix length less than 64. Interface ID does NOT support ZERO COMPRESSION "::". Please enter the complete information. For example: Please enter "0:0:0:2" instead of "::2".

2: Unique local address must start with "fd". The prefix and the address must be in same network and the prefix length must be 64.

ULA Prefix Advertisement: ☒ On ☐ Off

☒ Randomly Generate ☐ Statically Configure

IPv6 LAN Applications

DHCP: ☒ On ☐ Off

Auto-Configuration: ☐ Stateless ☒ Stateful

Start Interface ID:

End Interface ID:

Leased Time (Hour):

RADVD: ☒ On ☐ Off

MLD: ☒ On ☐ Off

☒ Standard Mode ☐ Blocking Mode

Enable MLD LAN to LAN Multicast: ☐ Enable ☒ Disable

DHCPv6 Relay: ☐ Enable ☒ Disable

Select ☒ **IPv6** to configure this service.

ITEM	DEFINITION
ULA Prefix Advertisement	Select ☒ On to enable the use of unique local addresses. The router will advertise the IPv6 /64 prefix to new devices on the network. ☒ Randomly Generate – Randomly generates the unique local addresses and the prefix. ☒ Statically Configure – Enter a static IPv6 address for the router if one has been assigned to you by your Internet Service Provider (ISP).
IPv6 LAN Applications	
DHCP	Select ☒ On to enable a DHCPv6 service.
Auto-Configuration	☒ Stateless – IPv6 hosts can generate the 64-bit Interface ID automatically using Internet Control Message Protocol version 6 (ICMPv6) messages. This type of configuration is suitable for small organizations and individuals. It allows each host to determine its address from the contents of received user advertisements. It makes use of the IEEE EUI-64 standard to define the network ID portion of the address. ☒ Stateful – This configuration makes use of the Dynamic Host Configuration Protocol for IPv6 (DHCPv6). Similar to IPv4 implementation, the DHCPv6 server maintains a list of nodes and the information about their state to know the availability of each IP address from the range specified by the network administrator.

LAN IPv6 Auto Configuration – continued

ITEM	DEFINITION
Auto-Configuration (continued)	When  Stateful Auto-Configuration is selected, the following additional settings appear: Start Interface ID – Enter the start address for the DHCPv6 IP Address pool. End Interface ID – Enter the end address for the DHCPv6 IP Address pool. Leased Time (Hour) – Assigned IP addresses will be expired after this time period and the address will be reassigned. The default setting is 24 hours.
RADVD	The Router Advertisement Daemon (RADVD) is used by system administrators in stateless auto-configuration methods of network hosts on IPV6 networks. The Router Advertisement Daemon (RADVD) is used in stateless auto-configuration on IPV6 networks. The RADVD is an open-source software agent that allows link-local advertisements of IPv6 router information using the Neighbour Discovery Protocol (NDP) as specified in RFC 2461. When IPv6 hosts first connects, they broadcast router solicitation (RS) requests onto the network to discover available routers. The RADVD agent answers requests with Router Advertisement (RA) messages. In addition, RADVD periodically broadcasts RA packets to update network hosts. The router advertisement messages contain the routing prefix used on the link, the link Maximum Transmission Unit (MTU), and the address of the responsible default router.

LAN IPv6 Auto Configuration – continued

ITEM	DEFINITION
DHCP Lease Time (Hour)	Assigned IP addresses will be expired after this time period and the address will be reassigned. Default is 24 hours.
MLD	Select  On to enable MLD (Multicast Listener Discovery) snooping and select the MLD Snooping mode to use.  Standard Mode – Allows all multicast traffic to LAN clients.  Blocking Mode – Only allows multicast subscribed clients to receive multicast packets.
Enable MLD LAN to LAN Multicast	Select  Enable to allow the Multicast Listener Discovery (MLD) snooping function to constrain the flooding of IPv6 multicast traffic on LANs on the router. Select  Disable to turn this functionality off.
DHCPv6 Relay	Select  Enable to relay DHCP messages between DHCPv6 clients and DHCPv6 servers on different IPv6 networks. The following DHCPv6 related settings are required: DHCPv6 Server IP Address – Enter the relay destination. Selected WAN Interface – Select the type of interface to be used. Hop limit – Set the number of hops (each time a data packet passes through a network device on its way from its source to its destination) a packet is allowed before being discarded.
Apply button	Click to save changes to your settings.

Local Area Network – VLAN

Local Network

- LAN
- Wireless

☐ IPV4
 ☐ IPV6
 ☒ VLAN

VLAN Setup

Select a LAN port:

☒ Enable VLAN Mode

Apply/Save

VLAN ID	Pbits	Delete
1	1	Delete

Add

Select ☒ **VLAN** to configure this service.

ITEM	DEFINITION
Select a LAN port	Select the port you would like to enable VLAN settings.
☒ Enable VLAN Mode	Select if you want to configure VLAN.
VLAN ID	Enter a VLAN value between 0 and 4094.
Pbits	Enter a value from 0-7 indicating the priority bits that dictates the priority of the VLAN.
Add button	Click to create an additional VLAN port.
Remove button	Select the ☒ checkbox in the Remove column for each of the VLAN setups you want to permanently delete and then click the Remove button.
Apply/Save button	Click to save changes to your settings and refresh the current display.

Wireless Advanced Settings – Wireless Bridge

Wireless Advanced Settings

Local Network

- LAN
- Wireless

☒ Wireless Bridge
 ☐ MAC Filter
 ☐ Advanced

Wireless Bridge

☒ 2.4 GHz
 ☐ 5 GHz

This page allows you to configure wireless bridge features of the wireless LAN interface. Select Disabled in Bridge Restrict which disables wireless bridge restriction. Any wireless bridge will be granted access. Selecting Enabled or Enabled(Scan) enables wireless bridge restriction. Only those bridges selected in Remote Bridges will be granted access.

Click "Refresh" to update the remote bridges. Wait for few seconds to update.

Click "Apply/Save" to configure the wireless bridge options.

Bridge Restrict:

Enabled(Scan)

Remote Bridges MAC Address:

	SSID	BSSID
☒	NetComm 4711	18:f1:45:af:e0:ae

Refresh

Apply/Save

Notes –

WPA/WPA2 encryption may not be compatible with other vendors, when operating in Wireless Bridge (WDS) mode.
Ensure that your SSID and security settings are identical with those on other bridge devices.

Wireless Bridge allows you to configure the router's access point as a Wireless Distribution Service (WDS).

Select ☒ **Wireless Bridge** to configure this service.

ITEM	DEFINITION
Select a frequency	Select ☒ 2.4GHz or ☐ 5GHz to separately define the Wireless Bridge settings for each. Note that you must click the Apply/Save button before switching frequencies or the changes made to the first will be lost.
Bridge Restrict	Specify which wireless networks will be allowed to connect to the NF18MESH by using the three Bridge Restrict options. Enabled – Turns on the wireless bridge restriction. Only those bridges entered or selected in Remote Bridges MAC Addresses will be granted access. Enabled (Scan) – Use this in conjunction with the Refresh button to populate the Remote Bridges MAC Addresses with available bridges. Disabled – Turns off the wireless bridge functionality.
Remote Bridges MAC Address	If Bridge Restrict = Enabled enter the applicable MAC Addresses of the other wireless access points. If Bridge Restrict = Enabled (scan) then click the Refresh button to scan for available bridges. Select ☒ the bridges from the scan results table that you want to turn on.
Refresh button	Works with the Bridge Restrict = Enabled (scan) setting, see above. Click to update the remote bridges. Updating takes a few seconds.
Apply/Save button	Click to save changes to your settings and refresh the current display.

Wireless Advanced Settings – MAC Filter

Wireless Advanced Settings

Local Network

- LAN
- Wireless

☐ Wireless Bridge
 ☒ MAC Filter
 ☐ Advanced

MAC Filter

☐ 2.4 GHz
 ☒ 5 GHz

Select SSID:

NetComm 0965

MAC Restrict Mode:
 ☐ Disabled
 ☒ Allow
 ☐ Deny

MAC Address	Remove
18:F1:45:AF:E0:A3	Delete
18:F1:12:AF:E0:AE	Delete

Add

MAC Filter allows you to add or remove the MAC Address of devices which will be allowed or denied access to the wireless network.

Select ☒ **MAC Filter** to configure this service.

ITEM	DEFINITION
Select a frequency	Select ☒ 2.4GHz or ☐ 5GHz to separately define the MAC Filter settings for each. Note that you must click the Apply/Save button before switching frequencies or the changes made to the first will be lost.
Select SSID	Select the wireless network you wish to configure.
MAC Restrict Mode	Specify which wireless networks will be allowed to connect to the NF18MESH by using the three Bridge Restrict options. Disabled – This will keep the MAC Addresses that you have added but turn off the MAC Filter functionality. Allow – Select to allow the listed MAC Addresses access to the wireless network. Deny – Select to prevent the listed MAC Addresses from having access to the wireless network.
MAC Address	Click the Add button to include additional MAC Addresses in the list. Enter MAC address in the format of: aa:bb:cc:11:22:33
Delete button	Click permanently remove the MAC Address from the list.
Add button	Click to include additional MAC Addresses in the list.

Notes –

While giving a wireless network some additional protection, MAC filtering can be circumvented by scanning a valid MAC and then spoofing one's own MAC into a validated one, using MAC Filtering may lead to a false sense of security. Your first line of defence to block access to your wireless network should be by changing your SSID and Wireless Security key.

Wireless Advanced Settings – Advanced

On the **Wireless Advanced Settings** page select **Advanced** to access the especially technical configuration settings of the wireless LAN interface.

Setting for two Channels: 2.4 GHz or 5 GHz

Select **2.4 GHz** or **5 GHz** to separately define the advanced wireless settings for each wireless channel.

Once you have made the required changes and set the appropriate parameters, click the **Apply/Save** button to save the changes for that channel and restart the wireless connection.

Common and Specific Settings

While both channels share 22 common settings, there are other settings which apply to only one channel or the other and there are other settings which apply only when the **802.11n/EWC** setting is **Auto**.

Shared Settings

See the **Common Advanced Wireless Settings** section for details on the settings shared by both channels.

Extra settings when 802.11n/EWC set to ‘Auto’

For both channels when **Auto** is selected for the 802.11n/EWC setting ten additional settings will appear on the Advanced settings page, refer to the **802.11n/EWC = Auto** section, below.

Extra setting when 802.11n/EWC set to ‘Disabled’

For both channels when **Disabled** is selected for the 802.11n/EWC setting ten additional settings will appear on the Advanced settings page, refer to the **802.11n/EWC = Disabled** section, below.

Extra 2.4 GHz settings when 802.11n/EWC set to ‘Disabled’

When **Disabled** is selected for the **802.11n/EWC** setting three additional settings become available only for the **2.4 GHz** channel, refer to the **2.4 GHz 802.11n/EWC = Disabled** section, below.

Extra 5 GHz settings

Regardless of the **802.11n/EWC** setting, the **5GHz** channel has six additional settings, refer to **Extra 5 GHz settings**, below.

Common Advanced Wireless Settings

Channel:	Auto
Country:	AUSTRALIA
Auto Channel Timer(min):	15
802.11n/EWC:	Disabled
54g Rate:	Auto
Multicast Rate:	Auto
Basic Rate:	Default
Fragmentation Threshold:	2346
RTS Threshold:	2347
DTIM Interval:	1
Beacon Interval:	100
Global Max Clients:	16
XPress Technology:	Enable
Transmit Power:	100%
WMM(Wi-Fi Multimedia):	Enable
WMM No Acknowledgement:	Disable
WMM APSD:	Enable
Beamforming Transmission (BFR):	Disabled
Beamforming Reception (BFE):	Disabled
Band Steering:	Enable
Enable Traffic Scheduler:	Disable
Airtime Fairness:	Enable

The following wireless settings are always available regardless of channel and regardless of the **802.11n/EWC** setting.

ITEM	DEFINITION
Channel	Select the appropriate channel to correspond with your network settings. All devices in your wireless network must use the same channel in order to work correctly. This router supports auto channelling functionality (default setting). The Current: channel number, together with the current level of detected interference, will be displayed on the right
Country	Select your country from the drop-down menu.
802.11n/EWC	Select 802.11n/EWC (Enhanced Wireless Consortium) functionality to be either: Disabled or Auto This settings will enable or disable 802.11n service, resorting to 802.11a/b/g service.
54g Rate	Allows you to specify the maximum bandwidth of the 802.11g network.
Multicast Rate	Select the multicast transmission rate in Mbps for the network. The rate of data transmission should be set depending on the speed of your wireless network. Available settings are: Auto, 6, 9, 12, 18, 24, 36, 48, 54 Select Auto to have the Router automatically use the fastest possible data rate and enable the Auto-Fallback feature. Auto-Fallback will negotiate the best possible connection speed between the Router and a wireless client. The default value is Auto.
Basic Rate	Limits the connection minimum rate for 802.11a/b/g service.
Fragmentation Threshold	Packets that are larger than this threshold are fragmented into multiple packets. Increase the fragmentation threshold if you encounter high packet error rates. Do not set the threshold too low, since this can result in reduced networking performance. The default setting is: 2346
RTS Threshold	The RTS Threshold is the minimum size in bytes for which the Request to Send/Clear to Send (RTS/CTS) channel contention mechanism is used. The router sends RTS frames to a particular receiving station and negotiates the

Common Advanced Wireless Settings – continued

ITEM	DEFINITION
RTS Threshold <i>Continued</i>	sending of a data frame. After receiving an RTS, the wireless station responds with a Clear to Send (CTS) frame to acknowledge the right to begin transmission. The RTS Threshold value should remain at its default setting (which is the maximum value): 2347 In a network with significant radio interference or large number of wireless devices on the same channel, reducing the RTS Threshold might help in reducing frame loss.
DTIM Interval	A DTIM (Delivery Traffic Indication Message) is a countdown informing clients of the next window for listening to broadcast and multicast messages. Enter a value between 1 and 255 seconds for the DTIM interval between messages.
Beacon Interval	SSID information is broadcast in specific intervals. The beacon interval may be adjusted in milliseconds (ms). The default (100 ms) is recommended.
Global Max Clients	Limits total number of simultaneously connected clients. This is combined between Main AP and Guest AP.
XPress Technology	Select Enable to turn on this is special frame-bursting accelerating technology for IEEE802.11g. The default is Enable.
Transmit Power	Select: 20%, 40%, 60%, 80% or 100% The Power level sets the strength of the wireless signal that the gateway transmits. If you live in an area where your wireless signal could overlap with other wireless networks, or you deploys multiple Access points, use a lower setting in order to reduce the amount of interference.

Common Advanced Wireless Settings – continued

ITEM	DEFINITION
Transmit Power <i>Continued</i>	use a lower setting in order to reduce the amount of interference. The default setting is 100%.
WMM (WiFi Multimedia)	WMM (WiFi Multimedia) maintains the priority of audio, video and voice, over other applications which are less time critical by ensuring that data from applications that require better throughput and performance are inserted in queues with higher priority. Select whether WMM is: Auto, Disabled or Enabled Before you disable WMM, you should understand that all QoS queues or traffic classes relate to wireless do not take effects.
WMM No Acknowledgement	This setting is only available when WMM (WiFi Multimedia) is set to Auto or Enabled. By default, the 'Ack Policy' for each access category is set to Disabled, meaning that an acknowledgement packet <u>is</u> returned for every packet received. This provides a more reliable transmission but increases traffic load, which decreases performance. Select Enabled to turn off the acknowledgement request. This can be useful for Voice transmissions where speed of transmission is important and packet loss is tolerable to a certain degree.
WMM APSD	This setting is only available when WMM (WiFi Multimedia) is set to Auto or Enabled. WMM APSD (Automatic Power Save Delivery) is an improvement to the 802.11e amendment adding advanced power management functionality to WMM. Select Enabled to ensure very low power consumption.

Common Advanced Wireless Settings – continued

ITEM	DEFINITION
Beamforming Transmission (BFR)	Select SU (Single-User) BFR to enable gateway to direct transmission signal to the wireless client. This may result in a better signal and potentially better throughput.
Beamforming Reception (BFE)	Select SU (Single-User) BFE to allow reception of beamformed signal by the gateway.
Band Steering	Select Enabled to detect if the client has the ability to use two bands. When enabled, the less congested 5GHz network is selected (by blocking the client's 2.4GHz network). Note that band steering requires both WiFi bands to utilize same SSID (WiFi Network Name) and same password (WiFi Password) on both 2.4GHz and 5GHz.
Enable Traffic Scheduler	Select Enabled to allow scheduling of traffic to improve efficiency and increase usable bandwidth for some types of packets by delaying other types.
Airtime Fairness	Select Enabled to allow the gateway to manage the receiving signal with other devices.

Extra Advanced Wireless Settings when: 802.11n/EWS = Auto

For either the 2.4 GHz or 5GHz channel, if the **802.11n/EWS** setting is set to **Auto** the following ten additional settings will appear on the **Advanced** settings page.

802.11n/EWC:	Auto	
Bandwidth:	40MHz	Current: 20MHz
Control Sideband:	Lower	Current: N/A
802.11n Rate:	Auto	
802.11n Protection:	Auto	
Support 802.11n Client Only:	Off	
RIFS Advertisement:	Off	
OBSS Co-Existence:	Disable	
RX Chain Power Save:	Enable	Power Save status: Low Power
RX Chain Power Save Quiet Time:	10	
RX Chain Power Save PPS:	10	

The following wireless settings are always available regardless of channel and regardless of the **802.11n/EWC** setting.

ITEM	DEFINITION
802.11n/EWC	When set to Auto , 802.11n service will be enabled.
Bandwidth	Select the bandwidth for the network: 20MHz , 40MHz , or 80MHz Note that 80MHz is only available on 5GHz WiFi In high wireless activity/interference environment, reduce the bandwidth to 20MHz for greater stability. The Current : bandwidth will be displayed on the right.
Control Sideband	If you select 20MHz in both bands you cannot select sideband and this drop-down menu is disabled. When you select the 40MHz bandwidth in both bands and manually select a channel, the following options will appear: Lower or Upper When you select Lower as the control sideband, the channel is 1~7. When Upper , the channel is 5~11. The Current control sideband (upper or lower) will be displayed on the right.

Advanced Wireless Settings: 802.11n/EWS = Auto – continued

ITEM	DEFINITION
802.11n Rate	Select the transmission rate for the 802.11n network. You can select from a range of transmission speeds in the drop-down menu, or you can select Auto to have the Router automatically select the best possible data rate and enable the Auto-Fallback feature. Auto-Fallback will allow wireless client to fall back to 802.11a/b/g legacy service. The default value is Auto.
802.11n Protection	The 802.11n standards provide a protection method so 802.11b/g and 802.11n devices can co-exist in the same network without “speaking” at the same time.
Support 802.11n Client Only	When On is selected, only stations that are configured in 802.11n mode are supported, all legacy service (802.11a/b/g) is turned away. Off will enable support for clients that are not 802.11n.
RIFS Advertisement	Reduced Interframe Space (RIFS) is a new feature introduced in 802.11n to improve efficiency.
OBSS Co-Existence	Enable OBSS (Overlapping BSS) and the router automatically changes the channel width from 40Mhz to 20Mhz to avoid interference with other APs and then back to 40Mhz, if possible
RX Chain Power Save	When the RX Chain Power Save feature is enabled one of the receive chains will be turned off to save power. The current Power Save status: (Full Power or Low Power) will be displayed on the right. The default setting is: Enabled

Advanced Wireless Settings: 802.11n/EWS = Auto – continued

ITEM	DEFINITION
RX Chain Power Save Quiet Time	This is the time interval (seconds) to wait before going into the power save model. To set the quiet time, 802.11n/EWC, see first item in this section above, must be set to Auto and RX Chain Power Save, see last setting, must be set to: Enable Range in seconds: 0 to 2147483647
RX Chain Power Save PPS	When RX Chain Power Save is enabled, set the RX Chain Power Save PPS to the maximum number of packets-per-second (PPS) that the WLAN interface should process for during RX Chain Power Save Quiet Time before the RX Chain Power Save feature activates itself.

Extra Advanced Wireless Settings when: 802.11n/EWS = Disabled

For either the 2.4 GHz or 5GHz channel, if the **802.11n/EWS** setting is set to **Disabled** one additional setting appears on the **Advanced** settings page.

ITEM	DEFINITION
Afterburner Technology	Afterburner is a 125HSM (125 High Speed Mode) speed enhancement technology for 802.11g/b

Extra Advanced Wireless Settings for 2.4 GHz only when: 802.11n/EWS = Disabled

When **Disabled** is selected for the **802.11n/EWC** setting three additional settings become available only for the **2.4 GHz** channel.

This settings will disable 802.11n service, reverting to 802.11a/b/g service.

XPress Technology:	Enable
54g Mode:	54g Auto
54g Protection:	Auto
Afterburner Technology:	Disabled
Preamble Type:	long
Transmit Power:	100%

ITEM	DEFINITION
54g Mode	For 54g mode , you can select Automatic , 802.11g Performance , or 802.11b Only . This option is only visible when 802.11n mode is set as Disabled .
54g Protection	When set to Automatic, the gateway will use RTS/CTS to improve the 802.11g performance in 802.11 mixed environments. When set to Disabled, the 802.11g performance will be maximized under most conditions while the other 802.11 modes (802.11b, etc.) will be secondary. This option is only visible when 802.11n mode is set as Disabled.
Preamble Type	If you are not using any 802.11b devices in your network, set the Preamble Type to Short for optimum performance. The Long Preamble type should be used when both 802.11g and 802.11b devices exist on your network. Preamble Type defines the length of the Cyclic Redundancy Check (CRC) block for communication between the gateway and wireless clients. The preamble consists of the Synchronization and Start Frame Delimiter (SFD) fields. The sync field is used to indicate the delivery of a frame to wireless stations, to measure frequency of the radio signal, to perform corrections if needed. The SFD at the end of the Preamble is used to mark the start of the frame.

Extra Advanced Wireless Settings for 5 GHz only

Regardless of the **802.11n/EWC** setting (it can be **Auto** or **Disabled**), the **5GHz** channel has six additional settings.

XPress Technology:	Enable
Regulatory Mode:	Disabled
Pre-Network Radar Check:	-1
In-Network Radar Check:	-1
TPC Mitigation(db):	0(off)
Afterburner Technology::	Disabled
Transmit Power:	100%
WMM(Wi-Fi Multimedia):	Enable
WMM No Acknowledgement:	Disable
WMM APSD:	Enable
Iperf Support:	Disable
Video Error Correction:	RX Auto Enable Decode
Beamforming Transmission (BFR):	Disabled

ITEM	DEFINITION
Regulatory Mode	Select: Disabled , 802.11h or 802.11d The default is Disabled .
Pre-Network Radar check	Checks to avoid channels that contain radar systems. Available only in the 802.11h Regulatory Mode, see last setting. The default is: -1 (disabled) Enter the number of seconds to check for radar on a channel before establishing a network. Used for 802.11h only.
In-Network Radar check	Checks to avoid channels that contain radar systems. Enter the number of seconds to check for radar when switching to a new channel after a network has been established. Used for 802.11h only.
TPC Migration (db)	TPC Mitigation settings will reduce wireless transmission power to prevent interference with radar stations. Enter the Transmitter Power Control (TPC) mitigation setting in decibels (db) as: 0(off) , 2 , 3 or 4 The default is 0(off)
Iperf Support	Select Enable if you want the NF18MESH to run the IPerf server application used by your ISP to measure network speeds. Only enable if instructed to do so by your ISP. Default setting: Disable
Video Error Correction	Settings include: RX Auto Enable Decode, RX Disable Decode, TX Enable Sequencer, TX Enable Sequencer (IPTV Mode), TX Enable Encode, TX Enable Encode (IPTV Mode)

The **Phone – SIP Settings** page shows detailed information about your VoIP phone configuration.

ITEM	DEFINITION
Interface Selecting	
Bound Interface Name	Select the correct Bound Interface Name from your Internet WAN Service Connection or you can select or Any_WAN
Fax Setting	
Fax negotiate mode	Select: Auto Switch , Negotiate or V.152
Bypass Codec	Select the codec used for FAX sending, check with your VoIP Provider for codec and FAX over VoIP support. Select: G711_A , G711_MU or T.38
Settings	
Enable T38 Redundancy Support	If you wish to send or receive faxes via VoIP and have a fax machine capable of using the T38 fax over VoIP protocol select this function to enable T.38 Codec redundancy. T.38 packet payloads are repeated for each packet.
Enable VAD redundancy support	Enables the Voice Activated Detection (VAD) function of the modem. When enabled, no data is transmitted during periods of silence or low volume, reducing the data usage.
VAD mode in signal	Select: None , Silencsupp or Annexa Annb VAD
Enable RTCP Flow Control	RTP Control Protocol (RTCP) provides out-of-band statistics and packet control information for an RTP session.
Enable Echo Cancellation	Enable to improve voice quality and network capacity by preventing echo from being created or removing it after it is already present.
Enable # to ASCII	Select convert phone number to ASCII format.
SIP Timer Setting	
	Set custom Timeout and Expiration times or accept the defaults.

ITEM	DEFINITION
Digitmap Setting	The VoIP Dialplan specifies how to interpret digit sequences dialled by the user, and how to convert those sequences into an outbound dial string. For more information refer to the Configuring a VoIP dial plan section on the next page.
QoS Setting	
DSCP for SIP	Select a specific Differentiated Services Code Point (DSCP) priority tag for Quality of Service (QoS) to SIP packets, the default: DEFAULT(00000)
DSCP for RTP	Select a specific Differentiated Services Code Point (DSCP) priority tag for Quality of Service (QoS) to RTP packets, the default: DEFAULT(00000)
Ethernet Priority Mark	Assign and tag packets with Class of Service (CoS) for Quality of Service at the media access control (MAC) level according to IEEE 802.1p. A value of 0-7 is accepted. Set -1 to disable CoS QoS.
Payload Setting	
RFC2198 Payload Value	Defines the RTP Payload size for Redundant Audio Data according to RFC2198 in lossy network connections. Enter a value between 97 to 127 , or accept the default of 125
Dtmf Relay setting	Select the signalling method for relaying Dual-tone Multi-frequency Relay Settings: InBand (default, used when the other two are not available), RFC2833 or SIPInfo
Call ID Setting	
Caller ID send Delay Time	Defines the delay after initial ring before CPE sends Caller ID to phone handsets. Enter a value in milliseconds (ms) between 500 to 1500ms , or accept the default of 600ms
Caller ID Message Type	Defines the Signalling method for sending caller id to phone handsets to display. Select a Caller ID Message Type: FSK_SDMF, FSK_MDMF or DTMF
FSK modulation Mode	Select the optimal Frequency-shift keying modulation mode: BellcoreGen, V23Gen or V23UK
Transport Setting	Select the appropriate SIP Transport protocol: UDP or TCP
SIP Extends	Select the appropriate PRACK (100rel) setting: Supported (default), Disabled or Required
Service Offer Setting	Select your Complementary business model: Local, Server, IMS or undefined

Configuring a VoIP dial plan

The router comes with a default dial plan suitable for use in Australia. The dial plan tells the router to dial a number immediately when a string of numbers entered on a connected handset matches a string in the dial plan. For example, the string 13[1-9]XXX allows the router to recognize six digit “13 numbers” allowing customers to call a business for the price of a local call anywhere in Australia. The reason it is configured as 13[1-9]XXX is because 13 numbers cannot begin with a 0 after the 13 while the last 3 digits may be any numeric digit.

You can configure the dial plan to match any string you like.

Rules

Below are some rules for configuring a dial plan:

-  Separate strings with a | (pipe) character.
-  Use the letter X to define any single numeric digit.
-  Use square brackets to specify ranges or subsets, for example:
 -  [1-9] allows any digit from 1 to 9
 -  [247] allows either 2 or 4 or 7
 -  Combine ranges with other keys, for example: [247-9*#] means 2 or 4 or 7 or 8 or 9 or * or #

Dial plan syntax

TO SPECIFY A...	ENTER	RESULT
New dial string	(Pipe)	Separates dial strings.
Digit	0 1 2 3 4 5 6 7 8 9	Identifies a specific digit (do not use #).
Range	[digit-digit]	Identifies any digit dialled that is included in the range.
Wild card	X	X matches any single digit that is dialled.
Timer	.t (dot t)	Indicates that an additional time out period of 4 seconds should take place before automatic dialling starts.

Dial plan example: Australia Dial Plan

```
000|[*#]X[0-9*]|*X[0-9*]|00[1-9]XX.t|014XXXXXXXX|016XXXXXXXX|0192X|0198XXXXXXXX|0[23478]XXXXXXXX|0500XXXXXX|11XX|123X|124XX|1251XX|1252XXX|1255X|1258XXX|1271X|130XXXXXXXX|13[1-9]XXX|1802XXX|189XX|1[8-9]XXXXXXXX|[2-9]XXXXXXX
```

Meaning

000 = Australia Emergency Call Service

0011*t = International number (After 0011 the router allows entry of arbitrary digits then and dials out after 4 seconds from the entry of the last digit.)(Note: Please ensure your VoIP provider supports international numbers for the country you are dialling.)

0[23478]XXXXXXXX = Landline numbers with area code 02,03,04,07,08 +XXXX XXXX and Mobile numbers with 04XXXXXXXXX

1[8-9]XXXXXXXX = 1800 and 1900 free call numbers

130XXXXXXXX = 1300 business numbers

13[1-9]XXX = 13 business numbers

[2-9]XXXXXXX = Landline numbers without area code

System

The **System** settings relate to your personalised settings on your NF18MESH. Use the tools in **Configurations** to make a back-up copy of your current settings or to retrieve and apply previously backed-up settings. Alternatively, you can reset all settings to the factory default settings.

Settings

To create a file containing all of your local NF18MESH settings select **Advanced > System > Settings**, then select  **Backup** and then click the **Backup Settings** button.

The backup configuration file will be saved to your browser's designated **Downloads** folder.

The backup configuration file will have a **.conf** file extension.

The default filename is: **backupsettings.conf**

We recommend that you give you backup settings file a meaningful name.

To use a previously saved backup settings file to reinstate those settings on your PC select **Advanced > System > Settings**, then select  **Update**.

Click the **Choose File** button and select a previously saved backup settings file (file extension **.conf**).

Then click the **Update Settings** button to over-write the current settings with the previously saved ones.

To restore the NF18MESH to its factory default settings, select **Advanced > System > Settings**, then select  **Factory Reset**.

Click the **Restore Default Settings** button.

A confirmation dialog will appear, click **OK** to restore the factory settings.

Note – All factory settings will be applied.

Update Firmware

From time to time NetComm will release new versions of the firmware to provide additional services or improve existing functionality.

Update Firmware

System

- Settings
- [Update Firmware](#)
- Internet Time

Step 1: Obtain an updated software image file from your ISP.

Step 2: Enter the path to the image file location in the box below or click the 'Browse' button to locate the image file.

Step 3: Click the 'Update Firmware' button once to upload the new image file.

NOTE: The update process takes about 2 minutes to complete, and your Broadband Router will reboot."

Software File Name:
 No file chosen

Note – If your device was not obtained from your ISP, contact NetComm Support.

Internet Time

Select **Advanced > System > Internet Time** to show the **Current Router Time**.

The tools on this page allow you to use the Network Time Protocol (NTP) to configure specific time servers to synchronise time, set local time zones, etc. for the modem.

The time servers are correct to within a few milliseconds of Coordinated Universal Time (UTC), also known as Greenwich Mean Time (GMT).

This page allows you to the modem's time configuration.

Current Router Time: Tue Oct 16 09:16:34 2018

☒ Automatically synchronize with Internet time servers

First NTP Server

Second NTP Server

Time zone offset

☒ Enable Daylight Saving Time

Apply/Save

ITEM	DEFINITION
Current Router Time	The current router time as per the settings in this page.
Automatically Synchronize	The router will periodically poll the designated NTP servers and confirm the correct time.
First NTP Server	Enter the address of your primary Network Time Protocol (NTP) server.
Second NTP Server	Enter the address of your secondary Network Time Protocol (NTP) server (optional, but recommended).
Time Zone Offset	Select your preferred time zone. Normally this will be the location of the device.
Enable Daylight Savings Time	Coordinated Universal Time or Universal Time Coordinated (UTC) is not adjusted for daylight saving time. To display the Current Router Time in the actual local time where Daylight Savings Time is in effect, select ☒ Enable Daylight Savings Time .
Apply/Save button	Click to apply any changes.

QoS

Basic

- 1 Open the **Advanced** menu and click the [Basic](#) link in the **QoS** section.

The screenshot shows the 'Queue Management Configuration' page. On the left, there is a sidebar with a 'QoS' icon and a list of options: 'Basic' (selected), 'Queue', 'Classification', and 'Port Shaping'. Below the list is a back arrow icon. The main content area has a title 'Queue Management Configuration' with a ribbon icon. It contains two notes: 'If Enable QoS checkbox is selected, choose a default DSCP mark to automatically mark incoming traffic without reference to a particular classifier. Click 'Apply/Save' button to save it.' and 'Note: If Enable QoS checkbox is not selected, all QoS will be disabled for all interfaces.' Below the notes, there is a checkbox labeled 'Enable QoS' which is checked. Underneath, there is a label 'Select Default DSCP Mark:' followed by a dropdown menu showing 'default(000000)'. At the bottom, there is a blue 'Apply/Save' button.

- 2 Select the ☒ **Enable QoS** option. It is enabled by default.
- 3 Select the **Default DSCP Mark** as **default(000000)**.
- 4 Click the **Apply/Save** button.

Queue

Open the **Advanced** menu and click the [Queue](#) link in the **QoS** section.

Name	Key	Interface	Qid	Prec/Alg/Wght	DSL Latency	PTM Priority	Shaping Rate (bps)	Min Bit Rate (bps)	Burst Size (bytes)	Enable	Remove
Default Queue	65	atm0	1	8/WRR/1	Path0					☐	
WMMVidPriority	66	eth2	2	3/SP						☐	Delete

Add
Enable

View Wlan Queue Setup

ITEM	DEFINITION
Name	Add a meaningful name so that you can readily identify the queue.
Key	System-generated sequential reference number.
Interface	Select an interface for the queue. Options include: LAN1~4 or eth4(wan)
Qid	Indicates the priority of the queue for the selected interface.
Prec/Alg/Wght	Indicates the Precedence, Algorithm and Weight used for calculating the priority of the queue.
DSL Latency	Path0 (fast) or Path1 (interleaved). This is selected while creating Interface. The default is: Path0
PTM Priority	Defines how PTM traffic packets should be handled. During congestion High priority traffic gets priority over Low.
Shaping Rate (bps)	The speed you would limit the queue to in bps (bits per second) after the burst size. Set the initial max speed traffic size before shaping the speed. This will allow packets such as Web Pages to load without being shaped, but allowing shaping to larger packets such as files transfer
Burst Size (bytes)	Set a maximum size for traffic to be sent in.
Add button	To create a new queue, click the Add button and define the queue in the Add Queue window, see next page.

Number of Queues

The maximum number of queues that can be defined depends on the type of connection:

- In **ATM mode**, a maximum of 16 queues can be configured.
- In **PTM mode**, a maximum of 8 queues can be configured.
- For each **Ethernet** interface, there is a maximum of 4 queues that can be configured.
- For each **Ethernet WAN** interface, there is a maximum of 8 queues that can be configured.

Queue Settings – continued

ITEM	DEFINITION
Enable button	Unselect ☐ Enable to disable the application of a queue rule without deleting it from the list. You can then later ☒ Enable to the queue rule without needing to redefine it.
Delete Button	To permanently remove a queue rule, click the Delete button. You will be not be prompted to confirm this.
View Wlan Queue Setup	Click to open the View WLAN Queue Setup page, see next page.

Add Queue

To define a new queue, click the **Add** button on the **QoS Queue Setup** page.

Define the queue's settings in the **Add Queue** page.

Add Queue

This screen allows you to configure a QoS queue and assign it to a specific layer2 interface. The scheduler algorithm is defined by the layer2 interface.

Name:

Enable:

Interface:

Queue Precedence:

- The precedence list shows the scheduler algorithm configured at each precedence level.
- Note that precedence level with SP scheduler may have only one queue.
- precedence level with WRR/WFQ scheduler may have multiple queues.

Minimum Rate: [1-1000000 Kbps] (-1 indicates no shaping)

Shaping Rate: [1-1000000 Kbps] (-1 indicates no shaping)

Shape Burst Size: [bytes] (shall be >= 1600)

All of the settings were previously described in the **QoS Queue Setup** page description, see page 84.

View WLAN Queue Setup

To view the WLAN Queue in order of priority, click the **View Wlan Queue Setup** button on the **QoS Queue Setup** page.

Name	SSKey	Interface	Qid	Prec/Alg/Wght	Enable
WMM Voice Priority	1	wl0	8	1/SP	Enabled
WMM Voice Priority	2	wl0	7	2/SP	Enabled
WMM Video Priority	3	wl0	6	3/SP	Enabled
WMM Video Priority	4	wl0	5	4/SP	Enabled
WMM Best Effort	5	wl0	4	5/SP	Enabled
WMM Background	6	wl0	3	6/SP	Enabled
WMM Background	7	wl0	2	7/SP	Enabled
WMM Best Effort	8	wl0	1	8/SP	Enabled
WMM Voice Priority	33	wl1	8	1/SP	Enabled
WMM Voice Priority	34	wl1	7	2/SP	Enabled
WMM Video Priority	35	wl1	6	3/SP	Enabled
WMM Video Priority	36	wl1	5	4/SP	Enabled
WMM Best Effort	37	wl1	4	5/SP	Enabled
WMM Background	38	wl1	3	6/SP	Enabled
WMM Background	39	wl1	2	7/SP	Enabled
WMM Best Effort	40	wl1	1	8/SP	Enabled

Edit Queue

To edit an existing queue, click on its **Name** and a page similar to the **Add Queue** page, see above, will display.

Enter your changes and click the **Apply/Save** button.

Classification

The NF18MESH allows you to create traffic class rules to classify the upstream traffic, assign queuing priority and optionally overwrite the IP header TOS (type of service) byte.

A traffic class rule consists of a class name and at least one condition. All of the specified conditions in a classification rule must be satisfied for the rule to take effect.

To view your existing class rules, or to create a new one, open the **Advanced** menu and click the [Classification](#) link in the **QoS** section.

Classification

- QoS
 - Basic
 - Queue
 - [Classification](#)
 - Port Shaping

To add a rule, click the **Add** button.

To remove rules, click the **Delete** button.

The **Enable** button will scan through every rules in the table. Rules with enable-checkbox checked will be enabled. Rules with enable-checkbox un-checked will be disabled.

The enable-checkbox also shows status of the rule after page reload.

If you disable WMM function in Wireless Page, classification related to wireless will not take effects

Class Name	Enable	Interface	Order	Action
Hi_Pri_LAN_WAN	Enable	LAN	1	Delete

Add

Traffic classification rule list

The list is displayed in a table displaying the user defined **Class Name**, whether or not it is enabled, its **Interface** and a system-defined **Order** number.

To edit a QoS Classification rule, click on its Class Name. Enter your changes and click the **Apply/Save** button.

To permanently remove a rule, click its **Delete** button.

To create a new rule, click the **Add** button and define the rule in the **Add Network Traffic Class Rule** page, see next section.

ITEM	DESCRIPTION
Traffic Class Name	Enter a name (max 15 characters) reflecting the priority of the defined rule, for example: PC1HighPriority
Rule Order.	Leave as Last .
Rule Status	Set to Enable .
Class Interface	Set the Class Interface according to how the device connects to the router. Options are: LAN , Wireless , Local and USB
Ether Type	Set the Ether Type to IP(0x800) . Other options include ARP(0x8086) , Ipv6(0x86DD) , PPPoE_DISC(0x8863) , 8865(0x8865) , 8866(0x8866) , 8021Q(0x8100) .
Source MAC Address	Enter the Source MAC Address of the device, the unique 12-character signature with every 2 characters separated by a colon (:), that you previously entered to reserve the device's IP address.
Source IP Address	Enter the Source IP Address of the device that you previously entered into the Static IP Lease List, in the range of 192.168.1.x
Destination MAC Address	Enter a Destination MAC Address if the connection is to a single device. This is useful for VPN connections. If you wish the destination MAC address to be any address leave the field blank.
Destination IP Address	Enter a Destination IP Address if the connection is to a single device. This is useful for VPN connections. If you wish the destination IP address to be any address leave the field blank.
Destination Subnet Mask	Enter a Destination Subnet Mask if you have entered a Destination MAC address and Destination IP address. This would normally be 255.255.255.0 unless your system administrator advises otherwise. If you have not entered a Destination MAC or IP address leave the field blank.
Differentiated Service Code Point (DSCP)	Set the Differentiated Service Code Point (DSCP) Check to EF(101110) .
Protocol	Set the Protocol to TCP . Other options include UDP , ICMP or IGMP .
Assign Classification Queue	Set Priority 1 for the highest priority with priority 3 being the lowest. Priority 2 is in between
Mark Differentiated Service Code Point (DSCP)	Set Mark Differentiated Service Code Point (DSCP) as AF11(001010)
Mark 802.1p Priority	The scale 0~7 , with 6 and 7 are reserved for networking performance.

Add Network Traffic Class Rule

This screen creates a traffic class rule to classify the ingress traffic into a priority queue and optionally mark the DSCP or Ethernet priority of the packet.

Click 'Apply/Save' to save and activate the rule.

Traffic Class Name:

Rule Order:

Rule Status:

Specify Classification Criteria (A blank criterion indicates it is not used for classification.)

Ingress Interface:

Ether Type:

Source MAC Address:

Source MAC Mask:

Destination MAC Address:

Destination MAC Mask:

Source IP Address/Mask:

Destination IP Address/Mask:

Differentiated Service Cod:

IP Length Check(Min-Max):

Protocol:

Specify Classification Results (A blank value indicates no operation.)

Specify Egress Interface (Required):

Specify Egress Queue (Required):

- Packets classified into a queue that exit through an interface for which the queue is not specified to exist, will instead egress to the default queue on the interface.

Mark Differentiated Service:

Mark 802.1p priority:

- Class non-vlan packets egress to a non-vlan interface will be tagged with VID 0 and the class rule p-bits.
- Class vlan packets egress to a non-vlan interface will have the packet p-bits re-marked by the class rule p-bits. No additional vlan tag is added.
- Class non-vlan packets egress to a vlan interface will be tagged with the interface VID and the class rule p-bits.
- Class vlan packets egress to a vlan interface will be additionally tagged with the packet VID, and the class rule p-bits.

Set Rate Limit(kbps): [Kbits/s]

	Set 5 as the highest priority, set 0 for lowest priority.
Apply/Save button	Click to save the new Network Class Traffic Rule .

Port Shaping

QoS port shaping supports traffic shaping of Ethernet interface, limiting continuous network speed without affecting burst traffic.

To access the port shaping tools, open the **Advanced** menu and click the [Port Shaping](#) link in the **QoS** section.

For example, when your browser loads a web page, this is a type burst traffic as the browser aims to fetch small amounts of data quickly and then leaves the connection idle. Limiting port speed alone will affect the speed at which web pages are loaded, causing users to feel that their overall internet connection speed is slow.

By configuring QoS Port Shaping with a Burst size, web pages are allowed to load using the burst speed, while continuous traffic such as file downloads will be shaped at a lower rate.

Calculation of shaping rate and burst size

To identify the best way to configure shaping rate and burst size, consider the equation below:

$$\text{Time window} = \text{Burst size} / \text{rate}$$

For example. if a 200 Mbps bandwidth limit is configured with a 5 ms burst window, the calculation becomes 200 Mbps x 5 ms = 125 Kbytes, which is approximately eighty-three (83) 1500-byte packets.

If the 200 Mbps bandwidth limit is configured on a Gigabit Ethernet interface, the burst duration is 125000 bytes / 1 Gbps = 1 ms at the Gigabit Ethernet line rate.

Result

After 1ms of burst data at full gigabit speed, the speed is shaped to 200Mbps.

Interface	Type	Shaping Rate (Kbps)	Burst Size (bytes)
eth4	WAN	-1	0
LAN1	LAN	-1	0
LAN2	LAN	-1	0
LAN3	LAN	-1	0
LAN4	LAN	-1	0

Apply/Save

ITEM	DEFINITION
Interface	Identifies the interface type.
Type	Identifies the connection type.
Shaping Rate (Kbps)	The speed you would limit the port to in Kbps (Kilobits per second) after the burst size.
Burst Size (bytes)	Burst size should be more than 10x MTU (>=15000 bytes).
Apply/Save button	Click the Apply/Save button to save and apply your changes.

Note – 1 byte = 8 bits

Security

The NF18MESH supports IP Filtering which allows you to set up rules to control incoming and outgoing Internet traffic.

The router provides two types of IP filtering: **Outgoing IP Filtering** and **Incoming IP Filtering**

Outgoing IP Filtering

By default, the router allows all outgoing Internet traffic from the LAN but by setting up Outgoing IP Filtering rules, you can block some users and/or applications from accessing the Internet.

The **Outgoing IP Filtering Setup** page contains a table of all currently defined outgoing IP filters and their details.

To create a new outgoing IP filter, click **Add**. The **Add-Outgoing IP Filter** page will be displayed.

Add Outgoing IP Filter

The screen allows you to create a filter rule to identify outgoing IP traffic by specifying a new filter name and at least one condition below. All of the specified conditions in this filter rule must be satisfied for the rule to take effect. Click 'Apply/Save' to save and activate the filter.

Filter Name:

IP Version:

Protocol:

Source IP address/prefix length:

Source Port (port or port:port):

Destination IP address/prefix length:

Destination Port (port or port:port):

Filters must contain at least one condition.

A rule will only be effective if all the conditions specified in the filter rule are satisfied.

ITEM	DEFINITION
Filter Name	Enter a name to identify the filtering rule. The name can have no spaces or special characters.
IP Version	Select the IP version to apply the filter to: IPv4 or IPv6
Protocol	Select the protocol type to block: UDP/TCP, UDP, TCP or ICMP
Source IP Address (/prefix length)	Enter the IP Address of the host on the LAN to be blocked. Note that you must also enter the prefix length and not the subnet mask.
Source Port (port or port:port)	Enter the port number used by the application to be blocked or a range of ports that the application to be blocked would be using. Leave blank to block all ports from this source.
Destination IP Address (/prefix length)	Enter the IP Address of the Remote Server/host to which connections should be blocked. Leave blank to block all ports to this destination. Note that you must also enter the prefix length and not the subnet mask.
Destination Port (port or port:port)	Enter the destination port number used by the application to be blocked or a range of ports that the application to be blocked would be using.
Apply/Save button	Click to save and activate the new filter. The new rule will then be displayed in the Outgoing IP Filtering Setup table list.

To edit an Outgoing IP Filter rule, click on its **Filter Name**. Enter your changes and click the **Apply/Save** button.

To delete a rule from the **Outgoing IP Filtering Setup** table, click its **Delete** button.

Incoming IP Filtering

When the firewall is enabled on a WAN or LAN interface, all incoming IP traffic is BLOCKED. However, some IP traffic can be ACCEPTED by setting up 'incoming' filters.

The **Incoming IP Filtering Setup** page contains a table of all currently defined Incoming IP filters and their details.

To create a new Incoming IP filter, click **Add**. The **Add-Incoming IP Filter** page will be displayed.

Add Incoming IP Filter

The screen allows you to create a filter rule to identify incoming IP traffic by specifying a new filter name and at least one condition below. All of the specified conditions in this filter rule must be satisfied for the rule to take effect. Click 'Apply/Save' to save and activate the filter.

Filter Name:

IP Version:

Protocol:

Source IP address/prefix length:

Source Port (port or port:port):

Destination IP address/prefix length:

Destination Port (port or port:port):

WAN Interfaces (Configured in Routing mode and with firewall enabled) and LAN Interfaces

Select one or more WAN/LAN interfaces displayed below to apply this rule.

☐ Select All
 ☐ ETH WAN/eth4.1
 ☐ ADSL_8_35/ppp0a0
 ☐ br0/br0

Filters must contain at least one condition.

A rule will only be effective if all the conditions specified in the filter rule are satisfied.

ITEM	DEFINITION
Filter Name	Enter a name to identify the filtering rule. The name can have no spaces or special characters.
IP Version	Select the IP version to apply the filter to: IPv4 or IPv6
Protocol	Select the protocol type to block: UDP/TCP, UDP, TCP or ICMP
Source IP Address (/prefix length)	Enter the IP Address of the Remote Server/Host from which to allow connections. Note that you must also enter the prefix length and not the subnet mask.
Source Port (port or port:port)	Enter the port number used by the application to allow or a range of ports that the application to be allowed would be using. Leave blank allow all ports from this source.
Destination IP Address (/prefix length)	Enter the IP Address of the Host on the LAN to which connections should be allowed. Leave blank allow all ports to this destination. Note that you must also enter the prefix length and not the subnet mask.
Destination Port (port or port:port)	Enter the destination port number used by the application to allow or a range of ports that the application to be allowed would be using.
WAN/LAN Interfaces (Configured in Routing mode and with firewall enabled)	Select one or more (or Select All) WAN/LAN interfaces displayed below to apply this rule: ☐ Select All ☐ ETH WAN/eth4.1 ☐ ADSL_8_35/ppp0a0 ☐ br0/br0
Apply/Save button	Click to save and activate the new filter. The new rule will then be displayed in the Incoming IP Filtering Setup table list.

To edit an Incoming IP Filter rule, click on its Filter Name. Enter your changes and click the **Apply/Save** button.

To delete a rule from the **Incoming IP Filtering Setup** table click its **Delete** button.

MAC Filtering

The NF18MESH offers the ability to use MAC Address filtering on ATM PVCs. You can elect to block or allow connections based on MAC Address criteria. The default policy is to allow all connections.

To create a new Incoming IP filter, click **Add**. The **Add-Incoming IP Filter** page will be displayed.

Add MAC Filter

Create a filter to identify the MAC layer frames by specifying at least one condition below. If multiple conditions are specified, all of them will take effect. Click "Apply/Save" to save and activate the filter.

Protocol Type:

Destination MAC Address:

Source MAC Address:

Frame Direction:

WAN Interfaces (Configured in Bridge mode only)

To edit an MAC filter, click the **Interface** name in the MAC filtering rules list. Its **MAC Filter** setting page will open. Make the necessary changes and click the **Apply/Save** button.

ITEM	DEFINITION
Protocol Type	Select the protocol type to which the filter should apply: • PPPoE (Point-to-Point Protocol over Ethernet) • IPv4 • IPv6 • Apple Talk • IPXNetBEUI (NetBIOS Extended User Interface) • IGMP (Internet Group Message Protocol)
Destination MAC Address	Enter the MAC address of the device that the NF18MESH will be blocked from accessing.
Source MAC Address	Enter the MAC address of the device that the NF18MESH will block from external communication.
Frame Direction	Select the direction of communication that will be blocked. Options are: • LAN<=>WAN • WAN=>LAN • LAN=>WAN
WAN Interface	This is configured in Bridge mode only.
Apply/Save button	Click to save and activate the new filter. The new rule will then be displayed in the Incoming IP Filtering Setup table list.

IPSec Settings

To create a new IPsec connection, click the **Add New Connection** button on the **IPSec Tunnel Mode Connections** page. The **IPSec Settings** page will be displayed.

IPSec Settings

IPSec Connection Name:

IP Version:

IPv4

Tunnel Mode:

ESP

Local Gateway Interface:

ETH WAN/eth4.1

Remote IPsec Gateway Address
(IP or Domain):

Tunnel access from local IP
Addresses:

Subnet

IP Address for VPN:

Mask or Prefix length:

Tunnel access from remote IP
Addresses:

Subnet

IP Address for VPN:

Mask or Prefix length:

Key Exchange Method:

Auto(IKE)

Authentication Method:

Certificate (X.509)

Certificates:

Perfect Forward Secrecy:

Enable

Advanced IKE Settings:

Show Advanced Settings

Apply/Save

Close

ITEM	DEFINITION
IPSec Connection Name	Enter a meaningful name to identify the IPsec tunnel.
IP Version	Select the IPsec Protocol to use.
Tunnel Mode	Select the applicable IPsec tunnel mode.
Remote IPsec Gateway	Enter the IP Address of the IPsec accessible IPsec End-Point to connect to.
Tunnel access from Local	Select the Local Network address or host address to which IPsec is connected.
IP Address from VPN	Enter the IP Address to be used locally for the IPsec tunnel.
Subnet mask for VPN	Enter the subnet mask of the local network address to which the IPsec connects to.
Tunnel Access from Remote	Select which Network address or Host address to which the remote IPsec endpoint is connected to.
IP Address for VPN	Enter the IP Address to be used on the remote end for the IPsec tunnel.
Subnet mask for VPN	Enter the subnet mask of the remote network address to which the IPsec connects to.
Key Exchange Method	Select the type of IPsec exchange is to be used on the IPsec tunnel.
Authentication Method	Select the applicable authentication for the IPsec tunnel.
Pre-Shared Key	Enter the pre-shared key (if applicable) to grant access to the IPsec tunnel.
Perfect Forward Secrecy	Select to use Perfect Forward Secrecy during key exchange for the IPsec tunnel.
Advanced IKE Settings	Configure advanced IKE settings for the IPsec tunnel such as the encryption method or key lifetime.
Apply/Save button	Click to save and activate the new connection. The new rule will then be displayed in the IPSec Tunnel Mode Connections table.

To edit an existing IPsec connection, click the **Connection Name** in the IPsec Tunnel Mode Connection list. Its **IPSec Tunnel Mode Connections** setting page will open. Make the necessary changes and click the **Apply/Save** button.

Note – NF18MESH IPsec will only support **Site to Site Tunnel** connections. It will not support **IPsec Transport** mode.

Access Control

Use the **Access Control** functionality to restrict access to your network for specific addresses.

Open the **Advanced** menu and click the [Access Control](#) link in the **Security** section.

Services access control list (SCL)

The Service Control List (SCL) allows you to enable or disable your Local Area Network (LAN) or Wide Area Network (WAN) services hosted by the NF18MESH, select ☒ **Enable** to the left and specifying the service port assigned to the service.

Services	LAN	LAN Port	WAN	Port
HTTP	☒ Enable	80	☐ Enable	80
HTTPS	☒ Enable	443	☐ Enable	443
TELNET	☒ Enable	23	☐ Enable	23
SSH	☒ Enable	22	☐ Enable	22
FTP	☒ Enable	21	☐ Enable	21
TFTP	☒ Enable	69	☐ Enable	69
ICMP	☐ Enable	0	☐ Enable	0
SNMP	☒ Enable	161	☐ Enable	161
SAMBA	☒ Enable	445	☐ Enable	445

Apply/Save

The following access services are available: **HTTP, HTTPS, TELNET, SSH, FTP, TFTP, ICMP, SNMP** and **SAMBA**

Click the **Apply/Save** button after making any changes to continue.

Access List

The **Access List** is located below the **Services access control list** (see left).

This is used to restrict management access from the internet to the specified IP address

Access Control Mode: ☒ Enable ☐ Disable

IP Address	Subnet Mask	Delete
123.123.123.123	255.255.255.254	Delete

Add

- 1 Select **Enable** to activate this access restriction tool.
- 2 Click the **Add** button to add a specific address to the restricted list.
- 3 Enter the IP Address to be restricted.
- 4 Include the Subnet Mask of the address to be restricted.
- 5 Click **Apply/Save** to apply the restriction to the address.

To permanently remove an address from the list, click the **Delete** button to its right.

Note – If both http and https is disabled on LAN and WAN you will lose access to the NF18MESH configuration pages.

Notes
