How do I Find the Wireless Security Key?
(3G15Wn)
About this Guide

This guide will take you through the process of changing or checking the wireless security settings on an existing wireless network.

This guide **will not** assist you to setup a new wireless network. Please refer to the wireless setup document for your model available from the support section of the NetComm* or Dynalink** website.

Any changes to your wireless security settings will require you to reconfigure wirelessly connected devices to use the new security settings. Please ensure that you have your wireless setup guide handy for this.
Finding the Wireless Security Key

To find the wireless security key of the 3G15Wn complete the following steps.

1. Ensure an ethernet cable is plugged from one of the LAN ports of the 3G15Wn to the ethernet port of your computer.
3. Enter “admin” as both the username and password and click the Ok button.
4. Select the **Security** option from the **Wireless** menu at the top of the screen.

5. The current SSID or network name will be displayed in the **Select SSID** field.

6. The wireless security key is displayed in one of four fields entitled **Network Key 1-4**. The current wireless security key is the key selected as the **Current Network Key**. The network security key pictured (**a1b2c3d4e5**) is the default wireless security key for this product. This default wireless security key is also written on the underside of the 3G15Wn.

7. If you wish to change the wireless security key and/or the wireless encryption type (using the **Network Authentication** field), make the appropriate changes and press the **Apply/Save** button.
