How do I Find the Wireless Security Key?

(3G29Wn)
About this Guide

This guide will take you through the process of changing or checking the wireless security settings on an existing wireless network.

This guide **will not** assist you to setup a new wireless network. Please refer to the wireless setup document for your model available from the support section of the NetComm website.

Any changes to your wireless security settings will require you to reconfigure wirelessly connected devices to use the new security settings. Please ensure that you have your wireless setup guide handy for this.
Finding the Wireless Security Key

To find the wireless security key of the 3G29Wn complete the following steps:

1. Ensure an ethernet cable is plugged from one of the LAN ports of the 3G29Wn router to the ethernet port of your computer.

![Authentication Required]

A username and password are being requested by http://192.168.1.1. The site says: "NetComm Dual ADSL2+ /3G Wireless N Router"

User Name: admin
Password: •••••

3. Enter “admin” as both the user name and password and click the Ok button.
Select the **Security** option from the **Wireless** menu at the top of the screen.
5. In the example below the WPA Pre-shared Key is the wireless security key.

6. To view the wireless security key select the “Click here to display” option. The example below shows the default wireless security key for the 3G29Wn which is “a1b2c3d4e5”.

7. If you wish to change the wireless security key and/or the wireless encryption type (using the Network Authentication field), or change the network name (SSID) make the selected changes and press the Apply/Save button.

Any changes to your wireless security settings will require you to reconnect any device connected via wireless using the new security settings of the router. Please ensure that you have your wireless setup guide handy for this.
