**Bigpond 3G Connection Guide**

This guide has been produced as the recommended method for connecting to the internet using a Bigpond Maxon BP3-EXT USB dongle as a 3G modem with the Netcomm 3GM1Wn as a 3G router.

**Step 1 – Connect the Bigpond 3G modem to your Computer/Laptop.**

1. Plug the Bigpond Maxon BP3-EXT USB dongle into your computer or laptop and connect to the internet using the Bigpond connection manager application.

2. Once the 3G modem is connected to the internet unplug it from the computer or laptop and plug it into 3GM1Wn router. [Do not Disconnect using the 3G modem connection manager]

Continue to the next page for **Step 2 – Connect to the Internet via the 3GM1Wn router**.
Step 2 – Connect to the Internet via the 3GM1Wn router.

1. Connect your computer/laptop via wireless to the 3GM1Wn. To do this mouse over the wireless icon in your pc system tray and select the 3GM1Wn SSID, the default being Netcomm Wireless. Enter the default password which is “a1b2c3d4e5”.
2. Navigate to http://192.168.1.1 in a web browser using “admin“ as both the system password to login to the router.

4. Set the **WAN Type** as 3G.
5. Select Bigpond in the **Choose your 3G Network** field.
6. Enter Telstra.bigpond as the **APN**.
7. Enter your Bigpond Username (eg. abc@bigpond.com) into the **Username** field.
8. Enter your Bigpond Password into the **Password** field and once again into the Verify Password field.
9. Press **Save**
10. Select **Toolbox** and then **Reboot**.

11. Press OK to begin the reboot process. You will now lose your wireless connection from the PC to the router and will need to re-establish the wireless connection.
12. Return to the **Status** page and confirm that the connection status changes to Up. You are now connected to the internet.
