IPTV Setup
(NB6)
This guide will take you through the process of configuring a VLAN on your modem / router to work with IPTV.

2. Enter admin for both username and password and click Ok.

3. Select Advanced > Internet > IGMP Proxy.

4. Check the IGMP Proxy Enabled and press Apply.
5. Select Advanced > Internet > Connections.

6. Press the Add button.
7. Set VPI to 0 and VCI to 35 with the service category as UBR without PCR.

8. Press the Next button.
9. Select Bridging as the protocol with LLC/SNAP BRIDGING as the encapsulation mode. Leave Quality of Service unchecked.

10. Press the Next button.
11. Leave the WAN IP settings as none unless directed otherwise by your Internet Service Provider.

12. Press the Next button.
13. Check the “Enable this Internet Connection” option. You have the option of changing the connection name if you so choose.

14. Press the Apply button.
15. Click Finish on the Internet Connection Configuration page.

16. The router will now save the configuration settings and reboot to enable the new settings.
17. The NB6 is now configured for IPTV.
