IPTV Setup
(NB9W)
IPTV

This guide will take you through the process of configuring a VLAN on your modem / router to work with IPTV.

2. Enter admin for both username and password and click Ok.
3. The main configuration page of the NB9W will open. Select Advanced > WAN.

4. Press the Add button.
5. Enter 0 into the VPI field and 35 in the VCI field with UBR without PCR as the Service Category.

6. Press the Next Button.
7. Select Bridging as the connection type and LLC/SNAP-BRIDGING as the encapsulation mode.

8. Press the Next button.
9. Ensure 'Enable Bridge Service' is selected. Changing the service name is optional but not recommended.

10. Press the Next button.
11. The WAN service summary will appear. Check the details ensuring they are to your preference.

12. Press the Save button.
The WAN setup page will show a bridged connection with VPI 0 and VCI 35 as per the screenshot below.

The NB9W is now configured for IPTV service.
