IPTV Setup
(NB9WMaxx)
This guide will take you through the process of configuring a VLAN on your modem / router to work with IPTV.

2. Enter admin for both username and password when prompted.

3. Select Advanced > WAN.

4. Press the Add button.
5. Enter 0 in the VPI field, 35 in the VCI field with UBR without PCR in the Service Category.
6. Quality of Service where the data traffic is prioritised for optimal performance of critical applications is optional and recommended.

7. Press the Next button.
8. Select Bridging as the connection type and LLC/SNAP BRIDGING as the encapsulation mode.

9. Press the Next button.
10. Check the Enable Bridge Service checkbox and type IPTV as the service name.

11. Press the Next button.
12. Press the Save button on the WAN Setup summary page.
13. On the Advanced > WAN page you should now see a service entry named IPTV.

14. Press the Save and reboot button to complete and save the configuration.

The NB9WMaxx is now configured for IPTV service.
