Print Server Setup Guide

This router is equipped with one high-speed USB2.0 host connection. With software support, users can connect USB devices such as a printer to the router. For this software release, only the print server is supported.

These steps explain the procedure for enabling the Printer Server.

1: Enable Print Server from Web User Interface. (192.168.1.1)

Follow these steps to login to the web user interface.

1: Open an Internet browser (e.g. Microsoft Internet Explorer) and enter the default IP address for the router in the URL address field at top. For example, if the IP address is 192.168.1.1, enter “http://192.168.1.1”.

2: Next, you will be prompted to enter your user name and password. Enter admin as the user name and admin as the password, and then click OK.

![Login Interface]

- User name: admin
- Password: (hidden)
- Remember my password

OK Cancel
3: After successfully logging in, click on **Advanced Setup** on the left menu and then **Print Server**. Select **Enable on-board print server** checkbox and enter **Printer name** and **model** & Press **Apply** to save settings.

**NOTE:** The Printer name can be any text string up to 40 characters. The Make and model can be any text string up to 128 characters.

2: Go to the **Printers and Faxes** application in the **Control Panel** and select the **Add** a printer function (as located on the side menu below).
3: Click **Next** to continue, when you see the dialog box below.

4: Select **Network Printer** and click **Next**

![Add Printer Wizard](image2)
5: Select **Connect to a printer on the Internet** and enter your **printer link**.

(Example: `http://192.168.1.1:631/printers/CANON`) and click **Next**.

**NOTE:** The printer name must be the same name entered in the web user interface “printer server setting” as in **step 1**.

**NOTE:** Please try to keep the Printer Name and ModelNumber simple, one word and no special characters.
6: Click **Have Disk** and insert the printer driver CD, **Incase** if you don’t find your printer and model number in the list.
7: Select driver file directory on CD-ROM and click **OK**.

8: Once the printer name appears, click **OK**.
9: Choose Yes or No for default printer setting and click Next.

10: Click "Finish".

11: Check the status of printer from Windows Control Panel, printer window. Status should show as Ready.
