NB5 Series - QoS
Enabling QoS for VoIP traffic

You will firstly need to log in to the NB5. Please see the product manual for specific instructions.

1. Click Advanced then IP QoS
   Or (if on a later firmware)
   Click Advanced, Application then IP QoS
2. Enter the Rule Name. (‘Spaces’ are invalid)
3. The Source IP and Source Netmask are not necessary.
   Source IP – The IP address of the device of which you are assigning the rule.
   Source Netmask – The subnet mask of the device of which you are assigning the rule.
4. Change the Protocol to UDP
5. Change the Traffic Priority to High
6. Click Apply.
