Remote Administration Setup

Modem Router - NF4V

NetComm Wireless

NF4V
Remote Administration

Remote administration allows you to access the modem / router / VOIP ATA configuration page from a computer connected to the internet.

This can also be used to enable your ISP (Internet Service Provider) to check your settings if you experience connection issues.

In the case of a VOIP ATA, you would also need to create a "Port Forwarding" rule on your modem / router for port 80 (or the applicable remote administration access port) pointing to your VOIP ATA's IP address.

If your modem / router is a NetComm or Dynalink unit, please see the appropriate "Port Forwarding" support document for assistance with adding this rule.

Before enabling remote access to your modem, we recommend changing the username and password required to login.

Please see our "Changing the default username and password" document for assistance with this.

You can also limit access to a specific IP or subnet (*)

This will prevent unauthorized access to your modem.

* - If supported by your model of modem / router.
LOGGING IN TO THE WEB INTERFACE

1. Open a web browser (such as Internet Explorer, Google Chrome or Firefox), type http://192.168.20.1 into the address bar and press enter.
2. At the login screen, type admin into both the Username and the Password fields and click OK.

3. Click on the Management menu at the left of the page, then click on Access Control option and then click on Services Control option.

4. Tick Enable checkbox of the WAN option for the HTTP service.
5. Click the Apply/Save button.

You should now be able to access your modem via the address:
http://<your external IP address>

You can find your IP address by going to http://www.whatismyip.com/.
