500Mbps Powerline Kit with Dual Band WiFi
THANKS FOR PURCHASING NETCOMM WIRELESS

This quick start guide is designed to get you up and running quickly with your new router. More advanced set up instructions can be found in the user manual which can be downloaded from www.netcommwireless.com

SETTING UP YOUR POWERLINE ADAPTERS

1. Connect one end of the supplied Ethernet cable into the LAN Ethernet port of your modem/router.
2. Connect the other end of the cable into the Powerline Adapter with the AC pass-through socket.
3. Connect the Powerline Adapter to a power point near your modem/router.*
   *For best performance plug your Powerline Adapters directly into the wall. Do not connect to a powerboard.
4. At this point, you can plug another electrical appliance into the Powerline Adapters AC pass-through if you wish to do so.
5. Plug the WiFi Powerline Adapter into a power point near where you want to access a wireless connection or connect a device via cable.
6. If connecting via cable, you can use the second supplied Ethernet cable to connect the Ethernet port of the Powerline Adapter to your device e.g. PC, set-top box, gaming console, blu-ray player.
7. Both Adapters will take a short time to find each other. Once they have, the Powerline LED on both adapters will be on.
ESTABLISHING WIFI CONNECTION

You can connect multiple WiFi devices, including laptops, desktops and PDA’s to your Powerline Adapter by following the 2 basic steps.

1. Using your WiFi device, scan the WiFi networks in your area and select the network that is the same as the Wireless SSID that is listed on the sticker on the device. Then click connect. The Wireless SSID will be in the format NetComm Wireless XX

2. Enter the wireless security key for your device. This is a random password that is also listed on the sticker.

LEDs

What can the LEDs tell me?
The powerline LED changes colour depending on the speed of your data transfer.

- Fastest
- Faster
- Fast
- Lights up when a device is connected to the adapter via an Ethernet cable
- Lights up when the adapter is connected to a power point
- Lights up when WiFi function is enabled (WiFi Powerline Adaptor Only)

LEDs Off - The adapter is not paired or wall socket not turned on.

BUTTONS

WiFi Powerline Adaptor Only

- When pressed for 2 seconds, will start WPS pairing function
- When pressed for 5 seconds will reset the device

Dual Band switch - Allows you to manually switch to a 2.4GHz or 5GHz WiFi frequency

Both Adaptors

Simple Connect Button - Create or join a Powerline network. More details on next page.
TROUBLE SHOOTING
My Powerline Adapters Will Not Connect To Each Other

1. Hold down the **Simple Connect** button on the first device for **15 seconds**, or until the LEDs flash, then hold the **Simple Connect** on the second device for **3 seconds** and finally hold the **Simple Connect button** on the first device for **3 seconds**.

2. The network password has now been reset and both adapters will be able to communicate with each other.

3. To make this process easier it is recommended that both Adapters are connected to a powerpoint near each other or in the same room.
