Remote Administration Setup
(NB5 Series)
Remote Administration:

Remote administration allows you to access the modem / router / VOIP ATA configuration page from a computer connected to the internet.

This can also be used to enable your ISP (Internet Service Provider) to check your settings if you experience connection issues.

In the case of a VOIP ATA, you would also need to create a “Port Forwarding” rule on your modem / router for port 80 (or the applicable remote administration access port) pointing to your VOIP ATA’s IP address.

If your modem / router is a NetComm or Dynalink unit, please see the appropriate “Port Forwarding” support document for assistance with adding this rule.

Before enabling remote access to your modem, we recommend changing the username and password required to login.

Please see our “Changing the default username and password” document for assistance with this.

You can also limit access to a specific IP or subnet (*)

This will prevent unauthorised access to your modem.

* - If supported by your model of modem / router.
**Enabling Remote Administration**

This guide will take you through the steps required to enable remote administration access to your modem / router / VOIP ATA.

To enable Remote Administration, please follow the steps below:

1. Open your web-browser (Internet Explorer, Mozilla firefox, etc.) and type the following numbers into the Address Bar:

   **192.168.1.1**

   Press Enter on the keyboard.

2. If you are asked to log into the modem, the default username and password is **admin**.

3. Click on **Advanced Settings**.

4. Click on **Advanced** on the top-menu.

5. Click on **Access Control** on the left-menu.

   You should now see the following:

6. Tick the **Enable Access Control** box.

   In the **WAN** column, tick the **Web** box.

   In **New IP**: enter the public IP Address of the PC that you want to allow remote access for.

   Tick the **Add** box.

   Press the **Apply** button.

7. Click on **Tools** on the top-menu.

8. Click on **System Commands** on the left-menu.

9. Press the **Save All** button.

   The Remote Administration settings have now been saved, and you will be able to login to your modem from the specified remote computer.

10. You should now be able to access your modem via the address: **http://<your external IP address>**

   You can find your IP address by going to [http://www.whatip.com/](http://www.whatip.com/).
